QUESTION 1

HOTSPOT

You need to ensure that users can sort files by using the Projects field.

From the List Settings page, which option should you select? (To answer, select the appropriate option in the answer area.)

Hot Area:

Columns

A column stores information about each document in the document library. The following columns are currently available in this document library:

Column (click to edit)	Type	Required
Title	Single line of text	
Project	Lookup	

- Create column
- Add from existing site columns
- Column ordering
- Indexed columns

Correct Answer:

Columns

A column stores information about each document in the document library. The following columns are currently available in this document library:

Column (click to edit)	Type	Required
Title	Single line of text	
Project	Lookup	

- Create column
- Add from existing site columns
- Column ordering
- Indexed columns

* To improve the performance of a large list or library, you can index a column. Then you can use the indexed column to filter new or existing views of the list or library. An indexed column is ordered.

Incorrect:

Column ordering is how the columns are ordered horizontally not how the records are ordered.

QUESTION 2

A user deploys a sandbox solution.

The user cannot activate the solution.

You need to ensure that the user can activate the solution.

What should you do? (Each correct answer presents a complete solution. Choose all that apply.)

- A. Grant permission to the user to activate the solution.
- B. Grant permission to the user to execute the solution.
- C. Configure a local mode load-balancing scheme.
- D. Stop the Microsoft User Code Host Service.
- E. Configure a remote mode load-balancing scheme.
- F. Start the Microsoft SharePoint Foundation Sandboxed Code Service.

Correct Answer: AF

A: Need to activate the feature that provisions the files. `siteCollection.Features.Add([guid_of_your]feature)`

F: To enable sandboxed solutions by using Central Administration

1.

Verify that you have the following administrative credentials:

2.

On the home page of the Central Administration Web site, in the System Settings section, click Manage services on server.

3.

On the Services on Server page, in the Server box, select the server on which you want to enable sandboxed solutions.

4.

In the Microsoft SharePoint Foundation Sandboxed Code Service row, in the Action column, click Start.

QUESTION 3

You need to set the appropriate permission levels. A variable named `customRole` references Wholesale. Which code segment should you add at line UA11?

A. `customRole.BasePermissions = SPBasePermissions.ViewPages;`

B. `customRole.BasePermissions = _permissions | SPBasePermissions.ViewFormPages;`

C. `customRole.BasePermissions = SPBasePermissions.EmptyMask | SPBasePermissions.ViewPages;`

D. `customRole.BasePermissions = _permissions | SPBasePermissions.ViewPages;`

Correct Answer: D

*

ViewPages, View pages in a Web site.

*

Scenario: A custom role named Wholesale must be created. Wholesale customers must be assigned to this role in order to view the promotions page.

Incorrect:

Not A, not C: The previous line, UA10, is: `_permissions = this.GetExistingPermissions();`

We should add this permission and the ViewPages permission.

Not B: ViewFormPages View forms, views, and application pages, and enumerate lists.

Reference: SPBasePermissions enumeration

<https://msdn.microsoft.com/en-us/library/microsoft.sharepoint.spbasepermissions.aspx>

QUESTION 4

After deploying a solution, a code-based hotfix becomes available.

You need to deploy the hotfix.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Use assembly binding redirection in the web application configuration file.
- B. Increment the assembly file version of the assembly.
- C. Increment the product version of the assembly.
- D. Increment the assembly version of the assembly.
- E. Use assembly binding redirection in the assembly policy file.

Correct Answer: AC

A: Assembly versions are everywhere in SharePoint – web.config files, web part definitions, workflow definitions, event receiver bindings – the list goes on. In each case, the version number is absolutely required so that SharePoint can load

the code to run at that time. If you update an assembly's version, you have two choices to ensure your code can still be loaded:

/ Find and update every reference to the previous assembly version.

/ Use a binding redirect in the relevant .config file (e.g. web.config) to point to the new version of the assembly.

C: Assembly Version : This is the version number used by framework during build and at runtime to locate, link and load the assemblies. When you add reference to any assembly in your project, it is this version number which gets embedded. At runtime, CLR looks for assembly with this version number to load. But remember this version is used along with name, public key token and culture information only if the assemblies are strong-named signed. If assemblies are not strong-named signed, only file names are used for loading.

Incorrect:

not B: Assembly File Version : This is the version number given to file as in file system. It is displayed by Windows Explorer. It's never used by .NET framework or runtime for referencing.

From scenario:

*

solution artifacts must adhere to industry best practices.

*

Code based hot fixes must be deployed directly to the Global Assembly Cache on all SharePoint servers.

*

Only one version of an assembly must be available at runtime.

QUESTION 5

HOTSPOT

You need to design the CloudManager app to meet the requirements.

What should you do? (To answer, select the appropriate option from each drop-down list in the answer area.)

Hot Area:

Answer Area

Create a CloudManagerApp app as an

Design the CloudManagerApp app UI with a/an app shape.

Correct Answer:

Answer Area

Create a CloudManagerApp app as an

Design the CloudManagerApp app UI with a/an app shape.

Box 1: App for SharePoint 2013 Box 2: Immersive Full Page

* Immersive (or full-page app): This shape provides a fully immersive experience by using the entire page. While this gives you complete control over the app experience, it is important to make sure that your app properly links back to the SharePoint site, so the user experience feels integrated and not lost. To make this simple, we provide a chrome control that not only lets your app automatically point a user back to their SharePoint environment, but it also provides your app with the current SharePoint cascading style sheet (CSS). So when SharePoint changes its CSS, say, through a theming change, your app will change its look and feel as well.
