QUESTION 1

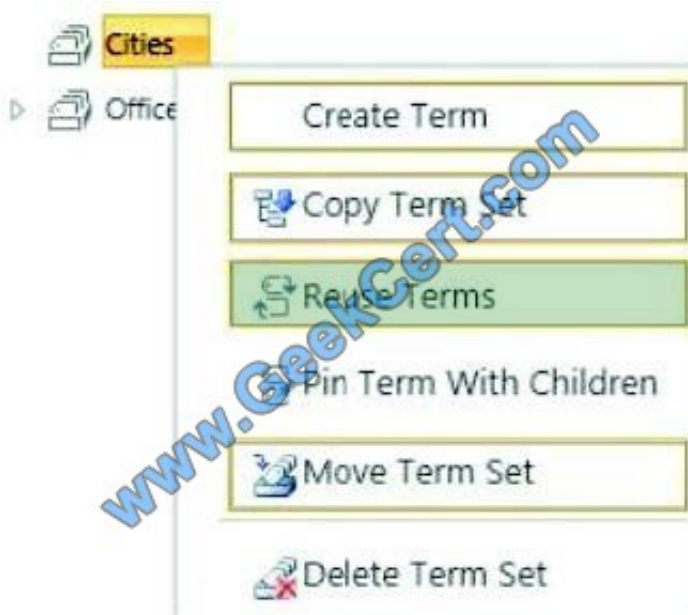

You need to add the city of Dallas to the Cities term set.

On the Term Store Management Tool page, which option should you select? (To answer, select the appropriate option in the answer area.)

Hot Area:

Correct Answer:

QUESTION 2

You need to generate document identifiers for each new document that is uploaded to the site. What should you do?

- A. Create a derived class that inherits from the abstract class named `Microsoft.Office.DocumentManagement.DocumentId` and then override all of the abstract methods.
- B. Create a derived class that inherits from the abstract class named `Microsoft.Office.DocumentManagement.DocumentIdProvider` and then override all of the virtual members.
- C. Create a derived class that inherits from the `Microsoft.Office.DocumentManagement.DocumentIdProvider` abstract class and then implement all abstract members.
- D. Create a class to implement the `Microsoft.Office.DocumentManagement.IDocumentId` interface and then override all of the virtual members.

Correct Answer: B

QUESTION 3

You deploy a solution to a SharePoint server.

You need to implement a method to programmatically access the health score of the SharePoint Server.

Which three code segments should you use in sequence? (To answer, move the appropriate segments from the list of segments to the answer area and arrange them in the correct order.)

Select and Place:

Answer Area

```
SharePointHealthScore = Int32.Parse  
(response.Headers["X-SharePointHealthScore"])
```

```
request.Method = "GET";  
request.BeginGetResponse(asyncResult) => {  
    HttpWebResponse response =  
        request.EndGetResponse(asyncResult) as  
        HttpWebResponse;
```

```
HttpWebRequest request =  
    WebRequest.Create(new Uri  
("uri", UriKind.Absolute) as HttpWebRequest);
```

```
SharePointHealthScore = Int32.Parse  
(response.Headers["SPHealthScore"])
```

Select and Place:

Correct Answer:

Answer Area

```
SharePointHealthScore = Int32.Parse  
(response.Headers["X-SharePointHealthScore"])
```

```
HttpWebRequest request =  
WebRequest.Create( new Uri  
("uri", UriKind.Absolute) as HttpWebRequest;
```

```
request.Method = "GET";  
request.BeginGetResponse( (asyncResult) => {  
HttpWebResponse response =  
request.EndGetResponse( asyncResult) as  
HttpWebResponse;
```

```
SharePointHealthScore = Int32.Parse  
(response.Headers["SPHealthScore"])
```

Note:

* (A, not D) SharePoint continuously calculates the Health Score and for each and every request the Health Score is sent as an HTTP Response Header, called X-SharePointHealthScore. Reference: SharePoint 2013: SharePoint Health Score and Throttling deep dive

QUESTION 4

You need to create the term set for the Document Library app named Project Documents.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Insert the following code segment into line DL18: `TermStoretermStore = taxonomySession.GetDefaultKeywordsTermStore();`
- B. Insert the following code segment into line DL18: `TermStoretermStore = taxonomySession.GetDefaultSiteCollectionTermStore();`
- C. Insert the following code segment into line DL24: `myTermSet.CreateTerm("-png", 1033, Guid.NewGuid());`
- D. Insert the following code segment into line DL24: `myTermSet.CreateTerm(".bmp", 1033, Guid.NewGuid());`

Correct Answer: AC

From scenario:

You must develop a console app to print the current term sets and each root term for the app by using the following style:

TermSet : name Term : name

(A, C, Not B, not D) The Document Library app named Project Documents must include a local term set for document types. The term set must contain the default terms .docx, .png, and .jpg.

QUESTION 5

You need to notify Windows phone users about the new Windows phone app.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

	Answer Area
Use JavaScript to set the value of the display property to block if the master page is being accessed by a Windows phone.	
Add a <div> tag that contains the notification message to the master page and set the default Cascading Style Sheets (CSS) display property to none .	
Edit the master page named Default.	
Set the value of the IncludedChannels property to WinPhone .	
Edit the master page named Phone.	
Add a device channel panel that contains the notification message to the master page.	
Set the value of the IncludedChannels property to Default .	

Correct Answer:

Answer Area	
Use JavaScript to set the value of the display property to block if the master page is being accessed by a Windows phone.	Edit the master page named Default.
Add a <div> tag that contains the notification message to the master page and set the default Cascading Style Sheets (CSS) display property to none .	Add a device channel panel that contains the notification message to the master page.
	Set the value of the IncludedChannels property to WinPhone .
Edit the master page named Phone.	
Set the value of the IncludedChannels property to Default .	

Note:

* A device channel panel is a container that can be used on a master page or page layout when you want specific content to render based on the alias of a given device channel, or set of channels. For example, you may have a web part or

control that you want revealed only on the desktop view of the site, and not on any mobile device. The device channel panel can enable you to encapsulate this web part in code, and enable you to render it only through a designated device

channel.

* From scenario:

You create a Windows Phone app. When users access the site by using a Windows phone, a message must appear on

every page of the mobile site. The message must notify users that they

can download the Windows Phone app to their phone. The HTML that contains the message must render only to the Windows phones.

Master page	Device channels
Phone	Three device channels use the Phone master page, including one called Windows Phone that has an alias named WinPhone.
