QUESTION 1

You are developing a Windows Communication Foundation (WCF) service that must be discoverable.

You need to ensure that the ServiceHost instance supports multiple discovery versions.

What should you do?

- A. Specify a unique DiscoveryVersion parameter for each endpoint constructor. Use the same value for the Address property of each endpoint.
- B. Use the endpoint constructor without the DiscoveryVersion parameter. Use a unique value for the Address property of each endpoint.
- C. Specify a unique DiscoveryVersion parameter for each endpoint constructor. Use a unique value for the Address property of each endpoint.
- D. Use the endpoint constructor without the DiscoveryVersion parameter. Use the same value for the Address property of each endpoint.

Correct Answer: C

QUESTION 2

You are developing a Windows Communication Foundation (WCF) service. The service needs to access out-of-process resources.

You need to ensure that the service accesses these resources on behalf of the originating caller.

What should you do?

- A. Set the value of ServiceSecurityContext.Current.WindowsIdentity.ImpersonationLevel to TokenImpersonationLevel.Impersonation.
- B. Set the value of ServiceSecurityContext.Current.WindowsIdentity.ImpersonationLevel to TokenImpersonationLevel.Delegation.
- C. Set the PrincipalPermissionAttribute on the service contract and update the binding attribute in the endpoint element of the configuration file to wsHttpBinding.
- D. Set the PrincipalPermissionAttribute on the service contract and update the bindingConfiguration attribute in the endpoint element of the configuration file to wsHttpBinding.

Correct Answer: B

QUESTION 3

You are developing a Windows Communication Foundation (WCF) service. The following code defines and implements the service. (Line numbers are included for reference only.)

```
01 <ServiceContract (SessionMode:=SessionMode.Allowed)>
02 Public Interface ICatchAll
03
04     <OperationContract (
05         IsOneWay:=False, Action:="", ReplyAction:="")>
06     Function ProcessMessage(
07         ByVal message As Message) As Message
08
09 End Interface
10
11 Public Class CatchAllService
12     Implements ICatchAll
13
14     Public Function ProcessMessage(
15         ByVal message As Message) As Message
16         Implements ICatchAll.ProcessMessage
17
18         ...
19         Return returnMsg
20
21 End Function
22
23 End Class
```

You need to ensure that two identical copies of the received message are created in the service.

Which code segment should you insert at line 14?

- A. Dim msgCopy As Message = TryCast(TryCast(message.CreateBufferedCopy(8192), Object), Message) Dim returnMsg As Message = TryCast(TryCast(message.CreateBufferedCopy(8192), Object), Message)
- B. Dim buffer As MessageBuffer = message. CreateBufferedCopy(8192) Dim msgCopy As Message = buffer.CreateMessage() Dim returnMsg As Message = msgCopy
- C. Dim msgCopy As Message = message Dim returnMsg As Message = message
- D. Dim buffer As MessageBuffer = message. CreateBufferedCopy(8192) Dim msgCopy As Message = buffer.CreateMessage() Dim returnMsg As Message = buffer.CreateMessage()

Correct Answer: B

QUESTION 4

Your company has a Windows Communication Foundation (WCF) service at the URL <http://services.contoso.com/OrderLookupService.svc>.

The section of the configuration file is as follows. (Line numbers are included for reference only.)

```
01
02
03
```

04

05 07

08

09

10

11

You need to ensure that the service publishes the WSDL description at <http://services.contoso.com/OrderLookupService.svc?wsdl>.

What should you do?

A. Change the serviceDebug element at line 05 as follows.

B. Insert the following element at line 06.

C. Insert the following element at line 06.

D. Insert the following element at line 06.

Correct Answer: C

QUESTION 5

You are modifying a Windows Communication Foundation (WCF) service that provides access to report generation system. The following code segment is part of your service contract. (Line numbers are included for reference only.)

```
01 <ServiceContract()>
02 Public Interface IAsyncReportService
03
04     Function BeginReportGeneration(ByVal a As Integer,
05         ByVal b As Integer,
06         ByVal cb As AsyncCallback,
07         ByVal s As Object) As IAsyncResult
08
09     Function EndReportGeneration(
10         ByVal r As IAsyncResult) As Integer
11 End Interface
```

Client applications are blocked while the service processes reports.

You need to ensure that the service methods are asynchronous.

What should you do?

- A. Insert the following code at line 04. [OperationContract] Insert the following code at line 07. [OperationContract(AsyncPattern = true)]
- B. Insert the following code at line 04. [OperationContract(AsyncPattern = true)]
- C. Insert the following code at line 04. [OperationContract(AsyncPattern = false)] Insert the following code at line 07. [OperationContract(AsyncPattern = true)]
- D. Insert the following code at line 04. [OperationContract (AsyncPattern = false)]

Correct Answer: B
