QUESTION 1

You create an ASP.NET website that contains a section named Sales. The website has the following requirements:

The Sales section must use a blue background for all pages.

All other sections must use a white background for all pages.

The Sales section must use the header and footer that are on the main website.

You need to configure the Sales section.

What should you use?

A.

A nested master page

B.

A master page

C.

An area

D.

A view

Correct Answer: A

QUESTION 2

You are designing a Windows Communication Foundation (WCF) service. The WCF service will support a common data access strategy for an ASP.NET 1.1 Web application and an ASP.NET 4 Web application. You have the following requirements:

Ensure that the WCF service complies with WS-* standards.

Enable backward-compatibility for clients that can consume only ASMX Web Services.

You need to recommend an endpoint and binding strategy for the WCF service. What should you recommend?

A. a single endpoint using NetMsmqBinding

B. a single endpoint using NetTcpBinding

C. multiple endpoints using NetTcpBinding and WSHttpBinding

D. multiple endpoints using BasicHttpBinding and WSHttpBinding

Correct Answer: D

QUESTION 3

You need to design a solution that supports the end user display requirements for data and graphics.

Which two actions should you recommend? (Each correct answer presents part of the solution. Choose two.)

- A. Use a language-specific master page.
- B. Replicate each page once for each supported language.
- C. Create a local resource file for each page and for each language.
- D. Populate the database with data in each language, and retrieve the data in the user's language.

Correct Answer: CD

QUESTION 4

During application testing, developers notice that the TempData property contents no longer persist between requests.

You need to advise the developers of the requirements for ensuring that the TempData property contents persist between requests.

Which should you advise?

- A. ViewState must be enabled at the page level.
- B. SessionState must be enabled in the Web application configuration.
- C. InProc session state must be enabled in the Web application.
- D. ViewState must be enabled in the Web application configuration.

Correct Answer: C

QUESTION 5

You are designing an ASP.NET Web application. A page of the Web application will contain a databound ListView control.

You need to recommend a strategy for accessing individual rows within the ListView control from client-side script based on the value in a specific data field.

What should you recommend?

- A. On the ListView control, set the ClientIDMode property to Static and set the ClientIDRowSuffix property to the name of the data field.
- B. On the @ Page directive, set the SmartMavigation property to True and set the ClientIDMode property to AutoID.
- C. On the ListView control, set the ClientIDMode property to Predictable and set the ClientIDRowSuffix property to the name of the data field.
- D. On the @ Page directive, set the AspCompat property to True and set the ClientIDMode property to Predictable.

Correct Answer: C
