QUESTION 1

You are designing an ASP.NET Web application that will support multiple display languages. You have the following requirements:

Change server control settings based on the selected language.

Enable strongly typed access to the resource objects.

You need to recommend a strategy for localizing server control properties.

Which strategy should you recommend?

A.

Add the Localizable attribute to the control definitions in the code-behind. In the App_LocalResources folder, create a resource file that contains localized values with keys named according to the . format.

B.

Use implicit resource expressions and store the resource file in the App_LocalResources folder.

C.

Use explicit resource expressions and store the resource file in the App_GlobalResources folder.

D.

Wrap localized server controls with a Localize server control. In the App_GlobalResources folder, create a resource file that contains localized values with keys named according to the .. format.

Correct Answer: C

QUESTION 2

You need to design session state management for the rewritten Web application. Which approach should you recommend?

A. Use the same machine key element attributes and values across all three servers.

B. Use different machine key element attributes and values across all three servers.

C. Use a persistent cookie to store the authentication ticket.

D. Use a third-party cookie to store the authentication ticket.

Correct Answer: A

QUESTION 3

An ASP.NET Web application connects to a Microsoft SQL Server 2008 database. Multiple users access the database. The Web.config file includes a database connection string. The Web application uses Windows authentication and impersonation. Anonymous access is turned off.

You need to recommend an approach for pooling database connections between users.

Which two actions should you recommend? (Each correct answer presents part of the solution. Choose two.)

- A. In the connection string, set the Integrated Security parameter to true.
- B. In the connection string, specify a user name and password.
- C. Do not explicitly close connections.
- D. Explicitly close connections.

Correct Answer: AC

QUESTION 4

You need to plan for authentication and authorization of Web application users. Which approach should you recommend?

- A. Use the Membership API.
- B. Use the Personalization API.
- C. Use the Local Security Policy.
- D. Use the Group Policy Manager.

Correct Answer: A

QUESTION 5

You monitor an application by using Windows Management Instrumentation (WMI). You add the following code segment to the application:

```

public static void Main()
{
    CounterCreationDataCollection collection = new CounterCreationDataCollection();
    PerformanceCounterCategory.Create("category", "",
        PerformanceCounterCategoryType.SingleInstance, collection);
    PerformanceCounter counter = new PerformanceCounter("category", "counter", false);
    CounterCreationData data = new CounterCreationData();
    data.CounterType = PerformanceCounterType.NumberOfItems64;
    collection.Add(data);
    Console.WriteLine("Output");
}

```

For each of the following statements, select True if the statement is true. Otherwise select False.

Hot Area:

True	False	
<input type="radio"/>	<input type="radio"/>	One value is provided for each performance counter.
<input type="radio"/>	<input type="radio"/>	After the performance counter is created, the code uses the new category immediately.
<input type="radio"/>	<input type="radio"/>	The PerformanceCounterType enumeration is used to allocate the size of the collection.

Correct Answer:

True	False	
<input checked="" type="radio"/>	<input type="radio"/>	One value is provided for each performance counter.
<input type="radio"/>	<input checked="" type="radio"/>	After the performance counter is created, the code uses the new category immediately.
<input type="radio"/>	<input checked="" type="radio"/>	The PerformanceCounterType enumeration is used to allocate the size of the collection.
