QUESTION 1

You are designing a Windows Azure application that will generate events for multiple clients.

Client web services might be behind NAT gateways.

You need to recommend an approach that will allow you to broadcast the events to clients.

What should you recommend?

- A. Use ADO.NET Data Services and provide a shared key to clients.
- B. Use Windows Azure Queues and provide a shared key to clients.
- C. Use Windows Azure Table storage and provide a shared key to clients.
- D. Use the Windows Azure AppFabric Service Bus and provide a shared secret to clients.

Correct Answer: D

The Windows Azure Service Bus provides a hosted, secure, and widely available infrastructure for widespread communication, large-scale event distribution, naming, and service publishing. The Service Bus provides connectivity options for Windows Communication Foundation (WCF) and other service endpoints including REST endpoints - - that would otherwise be difficult or impossible to reach. Endpoints can be located behind network address translation (NAT) boundaries, or bound to frequently-changing, dynamically-assigned IP addresses, or both. The Service Bus provides both "relayed" and "brokered" messaging capabilities. In the relayed messaging pattern, the relay service supports direct one-way messaging, request/response messaging, and peer-to-peer messaging. Brokered messaging provides durable, asynchronous messaging components such as Queues, Topics, and Subscriptions, with features that support publish-subscribe and temporal decoupling

QUESTION 2

Which of the following is not a requirement for creating an online secondary for SQL Database?

- A. They must be on separate servers.
- B. They both must be on the different subscription.
- C. The secondary server cannot be a lower performance tier than the primary.
- D. The secondary database must have the same name as the primary.

Correct Answer: C

Explanation

QUESTION 3

You need to configure scaling for the plagiarism detection service.

What should you do? To answer, select the appropriate values in the dialog box in the answer area.

QUESTION 4

You need to develop the web role.

How should you complete the relevant code? To answer, drag the appropriate code segments to the correct locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or

scroll to view content.

Select and Place:

Code Segments

Answer Area
namespace WebRole
{
 public class WebRole : RoleEntryPoint
 {
 public override bool ()
 {
 RoleEnvironment
 += WebRoleConfiguration_Change;
 ...
 }
 void WebRoleConfiguration_Change(object sender,
 EventArgs) eventArgs)
 {
 if (eventArgs.Changes.Any(change => change is RoleEnvironmentTopologyChange))
 {
 eventArgs.Cancel= ;
 }
 }
 }
}

Correct Answer:

Code Segments

Run

Changed

RoleEnvironmentChangedEventArgs

True

OnStop

Answer Area

```

namespace WebRole
{
    public class WebRole : RoleEntryPoint
    {
        public override bool OnStart()
        {
            RoleEnvironment.Changing += WebRoleConfiguration_Change;
            ...
        }
        void WebRoleConfiguration_Change(object sender,
            RoleEnvironmentChangingEventArgs eventArgs)
        {
            if (eventArgs.Changes.Any(change => change is RoleEnvironmentTopologyChange))
            {
                eventArgs.Cancel= False;
            }
        }
    }
}

```

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are developing an Azure application.

The image below represents the process flow for the application.

What should you use? To answer, select the appropriate options in the answer area. Each correct selection is worth one

point.

Hot Area:

Answer Area

Action

Solution

Trigger the webhook.

▼

Azure Alert
HTTP GET
HTTP POST

Select the webhook object for passing data to the runbook.

▼

WebhookName
RequestHeaders
RequestBody

Select the object type to use as parameters in the runbook.

▼

Webhook
Request
Webhook Data
Response

Correct Answer:
