QUESTION 1

You have an Azure SQL Database named Contosodb. Contosodb is running in the Standard/S2 tier and has a service level objective of 99 percent.

You review the service tiers in Microsoft Azure SQL Database as well as the results of running performance queries for the usage of the database for the past week as shown in the exhibits. (Click the Exhibits button.)

Average CPU Utilization In Percent	Maximum CPU Utilization In Percent	Average Physical Data Read Utilization In Percent	Maximum Physical Data Read Utilization In Percent	Average Log Write Utilization In Percent	Maximum Log Write Utilization In Percent
23.4	93.1	21.0	48.0	21.7	61.0

CPU Fit Percent	Log Write Fit Percent	Physical Data Read Fit Percent
99.7	99.8	99.6

You review the service tiers in Microsoft Azure SQL Database as well as the results of running performance queries for the usage of the database for the past week as shown in the exhibits. (Click the Exhibits button.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Hot Area:

	Yes	No
The database can be moved to the Basic tier without compromising performance.	○	○
The database can be moved to the Standard/S1 tier without compromising performance.	○	○
The database must be moved to the Premium/P1 tier to satisfy the service level objective.	○	○

Correct Answer:

	Yes	No
The database can be moved to the Basic tier without compromising performance.	○	◉
The database can be moved to the Standard/ S1 tier without compromising performance.	◉	○
The database must be moved to the Premium/P1 tier to satisfy the service level objective.	○	◉

QUESTION 2

You are designing an Azure application that provides online backup storage for hundreds of media files. Each file is larger than 1GB. The data storage solution has the following requirements:

*

Be capable of storing an average of 2 terabytes (TB) of data for each user.

*

Support sharing of data between all Microsoft Azure instances

*

Provide random read/write access

You need to recommend a durable data storage solution.

What should you recommend?

A.

Store data in the VHD file

B.

Azure Page Blob service

C.

Azure Block Blob service

D.

Local storage on the VM

Correct Answer: B

References: https://msdn.microsoft.com/en-us/library/azure/ee691964.aspx

QUESTION 3

You need to configure availability for the virtual machines that the company is migrating to Azure. What should you implement?

A. Traffic Manager

B. Express Route

C. Update Domains

D. Cloud Services

Correct Answer: B

ExpressRoute gives you a fast and reliable connection to Azure making it suitable for scenarios like periodic data migration, replication for business continuity, disaster recovery and other high availability strategies. It can also be a cost-effective option for transferring large amounts of data such as datasets for high performance computing applications or moving large VMs between your dev/test environment in Azure and on-premises production environment.

QUESTION 4

An application currently resides on an on-premises virtual machine that has 2 CPU cores, 4 GB of RAM, 20 GB of hard disk space, and a 10 megabit/second network connection. You plan to migrate the application to Azure. You have the following requirements:

*

 You must not make changes to the application.

*

 You must minimize the costs for hosting the application.

You need to recommend the appropriate virtual machine instance type.

Which virtual machine tier should you recommend?

A.

Network Optimized (A Series)

B.

General Purpose Compute, Basic Tier (A Series)

C.

General Purpose Compute, Standard Tier (A Series)

D.

Optimized Compute (D Series)

Correct Answer: B

General purpose compute: Basic tier An economical option for development workloads, test servers, and other applications that don\\'t require load balancing, auto-scaling, or memory-intensive virtual machines. CPU core range: 1-8 RAM range: 0.75 ~14 GB Disk size: 20-240 GB

QUESTION 5

You are designing an Azure storage solution for a company. The company has the following storage requirements:

* An app named App1 uses data analytics on stored data. App1 must store data on hierarchical file system that uses Azure Active Directory (Azure AD) access control lists.

* An app named App2 must have access to object-based storage. The storage must support role-based access control and use shared access signature keys.

You need to design the storage solution.

Which storage solution should you use for each app? To answer, drag the appropriate storage solutions to the correct apps. Each storage solution may be used once, more than once, or not at all. You may need to drag the split bar between

panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Storage solutions

| Azure Blob Storage |
| Azure Data Lake Store |
| Azure Site Recovery |
| Azure File Storage |
| Azure StorSimple virtual device |

Answer Area

App	Storage solution
App1	Storage solution
App2	Storage solution

Correct Answer:

Storage solutions

| |
| |
| Azure Site Recovery |
| Azure File Storage |
| Azure StorSimple virtual device |

Answer Area

App	Storage solution
App1	Azure Data Lake Store
App2	Azure Blob Storage
