QUESTION 1

You need to recommend data storage mechanisms for the solution.

What should you recommend? To answer, drag the appropriate data storage mechanism to the correct information type. Each data storage mechanism may be used once, more than once, or not at all. You may need to drag the split bar

between panes or scroll to view content.

Select and Place:

Data Storage Mechanisms

- Table storage
- Blob storage
- Queue storage
- MySQL

Answer Area

Information Type	Data Storage Mechanism
Contractor information	Data Storage Mechanism
Project images	Data Storage Mechanism

Correct Answer:

Data Storage Mechanisms

-
-
- Queue storage
- MySQL

Answer Area

Information Type	Data Storage Mechanism
Contractor information	Table storage
Project images	Blob storage

* Use Table storage for Contractor information

* Use Blob for Project Images

* Scenario: VanArsdel needs a solution to reduce the number of operations on the contractor information table. Currently, data transfer rates are excessive, and queue length for read/write operations affects performance.

/ A mobile service that is used to access contractor information must have automatically scalable, structured storage

/ Images must be stored in an automatically scalable, unstructured form.

Note: Blob is an acronym for Binary Large object. Basically Blob is a sequence of bytes – just what an application needs. Blob can hold audio, video, email messages, archived files, zip files or a word processing document in a very general

way.

QUESTION 2

You need to plan the business continuity strategy.

For each requirement, what should you recommend? To answer, select the appropriate option from each list in the answer area.

Hot Area:

Answer Area

You must ensure that customer facing data is replicated geographically.

- Shard the database horizontally and place each shard in a different datacenter.
- Create multiple instances of the SQL Database. Replicate the data between the instances.
- Use SQL Azure's backup feature to create a BACPAC file. Place the file in Blob storage.
- Replicate the data by using asynchronous replication.

You must ensure that client connect to Azure websites that run in the region closest to them.

- Use Traffic Manager to route traffic between geographic instances.
- Configure a local endpoint in the Azure Load Balancer Server. Configure the endpoints to use the same IP address.
- Assign separate URLs to multiple website instances. Configure DNS records to resolve the URL for each instance.
- Configure the site in an Azure WebSite and configure a WebJob to automate the failover.

Correct Answer:

Answer Area

You must ensure that customer facing data is replicated geographically.

- Shard the database horizontally and place each shard in a different datacenter.
- Create multiple instances of the SQL Database. Replicate the data between the instances.
- Use SQL Azure's backup feature to create a BACPAC file. Place the file in Blob storage.
- Replicate the data by using asynchronous replication.

You must ensure that client connect to Azure websites that run in the region closest to them.

- Use Traffic Manager to route traffic between geographic instances.
- Configure a local endpoint in the Azure Load Balancer Server. Configure the endpoints to use the same IP address.
- Assign separate URLs to multiple website instances. Configure DNS records to resolve the URL for each instance.
- Configure the site in an Azure WebSite and configure a WebJob to automate the failover.

QUESTION 3

You need to implement the security requirements. What should you implement?

- A. the GraphAPI to query the directory
- B. LDAP to query the directory
- C. single sign-on
- D. user certificates

Correct Answer: C

<https://blogs.msdn.microsoft.com/plankytronixx/2010/11/27/single-sign-on-between-on-premise-apps-windows-azure-apps-and-office-365-services/>

QUESTION 4

You need to design a data storage strategy for each application.

In the table below, identify the strategy that you should use for each application. Make only one selection in each column.

Hot Area:

Strategy	Human Resources Application	Metrics Application
Create separate SQL databases on individual virtual machines and partition appropriately.	<input type="radio"/>	<input type="radio"/>
Migrate the existing SQL database to a larger virtual machine.	<input type="radio"/>	<input type="radio"/>
Migrate the existing data to Azure table storage in the cloud.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Strategy	Human Resources Application	Metrics Application
Create separate SQL databases on individual virtual machines and partition appropriately.	<input checked="" type="radio"/>	<input type="radio"/>
Migrate the existing SQL database to a larger virtual machine.	<input type="radio"/>	<input type="radio"/>
Migrate the existing data to Azure table storage in the cloud.	<input type="radio"/>	<input checked="" type="radio"/>

* Scenario:

/ HRApp

The company has a human resources (HR) application named HRApp that stores data in an on-premises SQL Server database.

The data must remain on-premises and cannot be stored in the cloud.

The human resources data is used by all business offices, and each office requires access to the entire database.

/ Metrics application

Data is stored on an on-premises SQL Server database, but this data should be moved to the cloud.

QUESTION 5

You need to select the appropriate solution for monitoring the .NET application.

What should you recommend?

- A. Visual Studio IntelliTrace
- B. Application Insights
- C. Data Factory
- D. Microsoft Analytics Platform

Correct Answer: B
