QUESTION 1

You administer an Azure subscription for your company. You plan to deploy a virtual machine (VM) to Azure.

The VM environment must provide 99.95% uptime. A single switch outage must not cause the VM environment to be unavailable. The VM must not be offline due to installation of an update that requires a reboot.

You need to configure the environment.

Solution: Create an availability set with two VMs. Place the VMs in the same update domain.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 2

You plan to move several apps that handle critical line-of-business (LOB) services to Azure.

Appropriate personnel must be notified if any critical resources become degraded or unavailable.

You need to design a monitoring and notification strategy that can handle up to 100 notifications per hour.

Which three actions should you recommend be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. you will receive credit for any of the correct orders you select.

Select and Place:

| | |
|--|--|
| Monitor Azure status for warnings and errors. | |
| Create an action group for alerts to email addresses. | |
| Create a resource group containing the critical resources. | |
| Create an activity log alert for service health. | |
| Create an action group for alerts to SMS phone numbers. | |
| Monitor service health for incidents and action required notifications | |

Correct Answer:

| | |
|--|--|
| Monitor Azure status for warnings and errors. | Create an activity log alert for service health. |
| | Create a resource group containing the critical resources. |
| | Create an action group for alerts to email addresses. |
| Create an action group for alerts to SMS phone numbers. | |
| Monitor service health for incidents and action required notifications | |

QUESTION 3

You need to recommend a solution for publishing one of the company websites to Azure and configuring it for remote debugging. Which two actions should you perform? Each correct answer presents part of the solution.

- A. From Visual Studio, attach the debugger to the solution.
- B. Set the application logging level to Verbose and enable logging.
- C. Set the Web Server logging level to Information and enable logging.
- D. Set the Web Server logging level to Verbose and enable logging.
- E. From Visual Studio, configure the site to enable Debugger Attaching and then publish the site.

Correct Answer: AE

* Scenario:

/ Mitigate the need to purchase additional tools for monitoring and debugging.

/A debugger must automatically attach to websites on a weekly basis. The scripts that handle the configuration and setup of debugging cannot work if there is a delay in attaching the debugger.

A: After publishing your application you can use the Server Explorer in Visual Studio to access your web sites.

After signing in you will see your Web Sites under the Windows Azure node in Server Explorer. Right click on the site that you would like to debug and select Attach Debugger.

E: When the processes appear in the Available Processes table, select w3wp.exe, and then click Attach.

Open a browser to the URL of your web app.

QUESTION 4

You plan to implement a predictive analytics solution in Azure Machine Learning Studio (ML Studio). You intend to train

the solution by using existing data that resides onpremises.

The on-premises data is a collection of delimited text files that total 5 GB in size.

You need to identify the process of adding the existing data to the solution.

What should you identify? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Upload data into:

▼
ML Studio
an Azure SQL Database

In ML Studio, create:

▼
a DataSet
an experiment

In ML Studio, consume data by using the:

▼
Add Rows module
Enter Data module
Reader module

Correct Answer:

Answer Area

Upload data into:

ML Studio
an Azure SQL Database

In ML Studio, create:

a DataSet
an experiment

In ML Studio, consume data by using the:

Add Rows module
Enter Data module
Reader module

QUESTION 5

You are designing a plan for testing a Windows Azure service. The service runs in the development fabric but fails on Windows Azure.

You need to recommend an approach for identifying errors that occur when the service runs on Windows Azure. What should you recommend?

- A. Attach a debugger to the Windows Azure role instance.
- B. Analyze debugging information captured by Windows Azure Diagnostics.
- C. Modify the service configuration for the Windows Azure role to access development storage.
- D. Analyze debugging information written to the output window of the Windows Azure role instance.

Correct Answer: B

You can use Azure Diagnostics to log detailed information from code running within roles, whether the roles are running in the development environment or in Azure. References: <https://docs.microsoft.com/en-us/azure/vs-azure-tools-debugging-cloud-services-overview>
