QUESTION 1

HOTSPOT

You need to retrieve the system logs and the event logs from only the hosts in an Azure Stack integrated system.

Which command should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

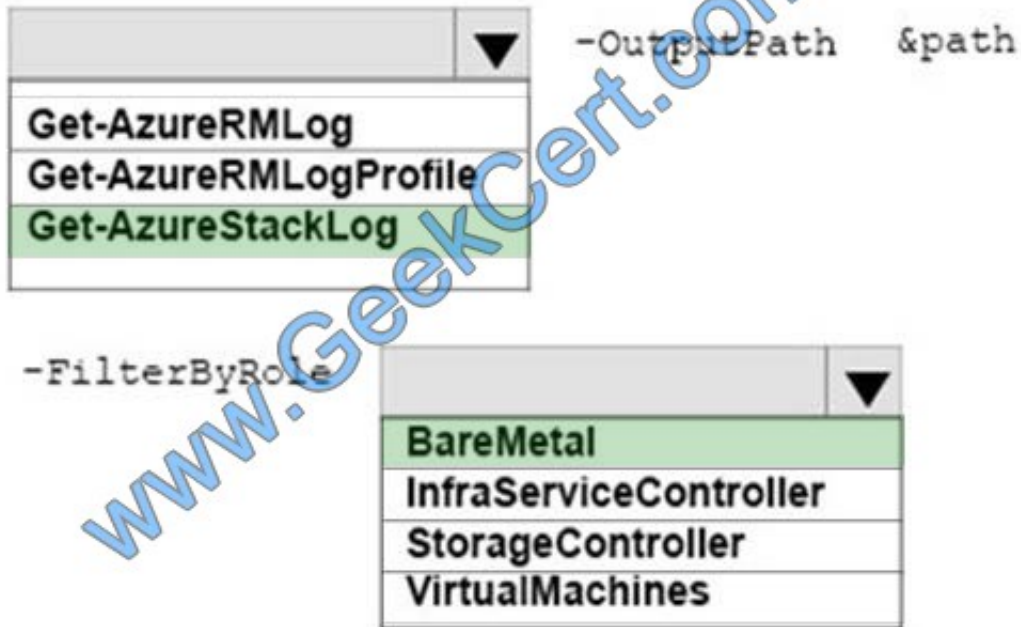

Answer Area

The screenshot shows a command prompt interface with two dropdown menus. The first dropdown menu is for the parameter `-OutputPath &path` and contains the following options: `Get-AzureRMLog`, `Get-AzureRMLogProfile`, and `Get-AzureStackLog`. The second dropdown menu is for the parameter `-FilterByRole` and contains the following options: `BareMetal`, `InfraServiceController`, `StorageController`, and `VirtualMachines`. A large watermark `www.GeekCert.com` is overlaid diagonally across the image.

Correct Answer:

Answer Area

<https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-diagnostics>

QUESTION 2

You manage an Azure Stack integrated system.

You need to identify the IP address of the external time server that was configured during Azure Stack provisioning.

What should you do?

- A. From the Azure Resource Manager endpoint, run `Get-AzsUsageConnection`.
- B. From the privileged endpoint, run `Get-AzureStacklog`.
- C. From the Azure Resource Manager endpoint, run `Get-AzsResourceProviderManifest`.
- D. From the privileged endpoint, run `Get-AzureStackStampInformation`.

Correct Answer: D

QUESTION 3

You have an Azure Stack integrated system in the perimeter network.

You need to ensure that users in the Internet can access Azure Stack Storage blobs.

Which TCP ports should you open on the firewall?

- A. 20 and 21
- B. 137 only
- C. 80 and 443
- D. 445 and 5445

Correct Answer: C

Storage Blob requires port 80 for http and port 443 for https.

QUESTION 4

HOTSPOT

You have an Azure Stack integrated system.

You need to install the Azure Stack-compatible Azure PowerShell modules on a management workstation.

You set the \$profile variable to the correct API version.

Which commands should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

```
Install-Module -Name 

|                      |
|----------------------|
| AzureRm.BootStrapper |
| AzureRmProfile       |
| AzureStack           |

 -Force
```

```

|                       |
|-----------------------|
| Get-AzureRmProfile    |
| Select-AzureRmProfile |
| Use-AzureRmProfile    |

 -Profile profile$ -Force
```

Correct Answer:

Answer Area

```
Install-Module -Name 

|                      |
|----------------------|
| AzureRm.BootStrapper |
| AzureRmProfile       |
| AzureStack           |

 -Force
```

```

|                       |
|-----------------------|
| Get-AzureRmProfile    |
| Select-AzureRmProfile |
| Use-AzureRmProfile    |

 -Profile profile$ -Force
```

QUESTION 5

You have an Azure Stack integrated system that has multitenancy enabled.

You successfully onboard several tenants.

Your company has an Active Directory domain named adatum.com that contains an administrative account named admin@adatum.com.

An Azure Stack operator attempts to onboard a new tenant for adatum.com.

You attempt to sign in to the new tenant by using admin@adatum.com, and you receive the following error message: "Uh oh! Your account is not authorized to access the portal. Did you sign in to the correct directory? Append the target directory to the portal URL (for example, `https://portal.com/contoso.onmicrosoft.com\`), and try again."

You need to ensure that you can sign in to the new tenant by using admin@adatum.com.

What should you run?

- A. Get-AzureStackToken and New-AzsLocation
- B. New-AzsTenantSubscription and Set-AzsSubscription
- C. Register-AzsWithMyDirectoryTenant and Register-AzSGuestDirectoryTenant
- D. Enable-AdfsEndpoint and Register-AdfsAuthenticationProvider

Correct Answer: C
