QUESTION 1

You are changing the security settings of a file named MyDat

A. xml. You need to preserve the existing inherited access rules. You also need to prevent the access rules from inheriting changes in the future. Which code segment should you use?

B. `FileSecurity security = new FileSecurity("mydata.xml",
AccessControlSections.All);security.SetAccessRuleProtection(true, true);File.SetAccessControl("mydata.xml", security);`

C. `FileSecurity security = new FileSecurity();security.SetAccessRuleProtection(true, true);File.
SetAccessControl("mydata.xml", security);`

D. `FileSecurity security = File.GetAccessControl("mydata.xml");security.SetAccessRuleProtection(true, true);`

E. `FileSecurity security = File.GetAccessControl("mydata.xml");security.SetAuditRuleProtection(true, true);
File.SetAccessControl("mydata.xml", security);`

Correct Answer: A

QUESTION 2

You create Web-based client applications. You are creating a page for a Web-based application. You must ensure that the page meets the following requirements:

Uses forms authentication to validate users. Deploys on a single Web server. Is highly secure. Gives higher priority to security than speed. You need to recommend a configuration setting for your page. Which configuration setting should you

choose?

A.

B.

C.

D.

Correct Answer: D

QUESTION 3

You are developing an application that will deploy by using ClickOnce. You need to test if the application executes properly. You need to write a method that returns the object, which prompts the user to install a Click Once application. Which code segment should you use?

- A. return ApplicationSecurityManager.ApplicationTrustManager;
- B. return AppDomain.CurrentDomain.ApplicationTrust;
- C. return new HostSecurityManager();
- D. return SecurityManager.PolicyHierarchy();

Correct Answer: A

QUESTION 4

You create Web-based client applications. You are modifying an existing program so that it can be scaled out across a load balanced Web farm. The current design stores session specific data in a session variable. You are required to select an appropriate design. You decide to store the session state in a Microsoft SQL Server database that can be accessed by all the Web servers in the Web farm. You need to evaluate whether the design meets the requirements. What should you conclude?

- A. The design meets the requirements.
- B. The design does not meet the requirements. You need to store the data in a Web.config file that is stored on a shared file server.
- C. The design does not meet the requirements. You need to store the data on a separate SQL Server instance and replicate the data between the SQL Server instances.
- D. The design does not meet the requirements. You need to store the data in the Machine.config file on each computer in the Web farm.

Correct Answer: A

QUESTION 5

You create Web-based applications. You are creating an Internet banking application.

The application will be used by bank account holders.

You are creating a method to withdraw money from an account. The method must change the account balance according to one of the following rules:

If the amount that is being withdrawn is less than or equal to the account balance, then subtract the amount from the balance.

If the amount that is being withdrawn is greater than the account balance by up to 500 dollars, then subtract the amount and a 35-dollar fee from the balance. If the amount that is being withdrawn is greater than the account balance by more than 500 dollars, then generate an error.

You are translating the specification given here into pseudo code. You start by writing the following code.

Method

public void Withdraw

Input parameters

decimal amount

Class field

decimal balance

Pseudo code

//your pseudo code

You need to insert the correct pseudo code. Which code segment should you insert?

A. If amount balance + 500 then throw exception

B. If amount
