QUESTION 1

Your company has a server named server1 that runs Windows Server 2008 R2. Server1 has the DHCP Server server role installed.

You find that a desktop computer named Computer1 is unable to obtain an IP configuration from the DHCP server.

You install the Microsoft Network Monitor 3.0 application on Server1. You enable P-mode in the Network Monitor application configuration. You plan to capture only the DHCP server-related traffic between Server1 and Computer1.

The network interface configuration for the two computers is shown in the following table.

	Server1	Computer1
IP address	192.168.2.1	169.254.15.84
MAC address	00-0A-5E-1C-7F-67	00-17-31-D5-5E-FF

You need to build a filter in the Network Monitor application to capture the DHCP traffic between Server1 and Computer1. Which filter should you use?

- A. IPv4.Address == 169.254.15.84 andand DHCP
- B. IPv4.Address == 192.168.2.1 andand DHCP
- C. Ethernet.Address == 0x000A5E1C7F67 andand DHCP
- D. Ethernet.Address == 0x001731D55EFF andand DHCP

Correct Answer: D

QUESTION 2

Your network contains a server named Server1. Server1 has DirectAccess deployed. A group named Group1 is enabled for DirectAccess.

Users report that when they log on to their computers, the computers are not configured to use DirectAccess.

You need to ensure that the users\ computers are configured to use DirectAccess. What should you do first?

- A. On each client computer, add Group1 to the Distributed COM Users group.
- B. On each client computer, add Group1 to the Network Configuration Operators group.
- C. From Active Directory Users and Computers, add the users\ user accounts to Group1.
- D. From Active Directory Users and Computers, add the users\ computer accounts to Group1.

Correct Answer: D

QUESTION 3

Your network consists of a single Active Directory domain. All servers run Windows Server 2008 R2. You have a server named Server1 that hosts shared documents. Users report extremely slow response times when they try to open the shared documents on Server1.

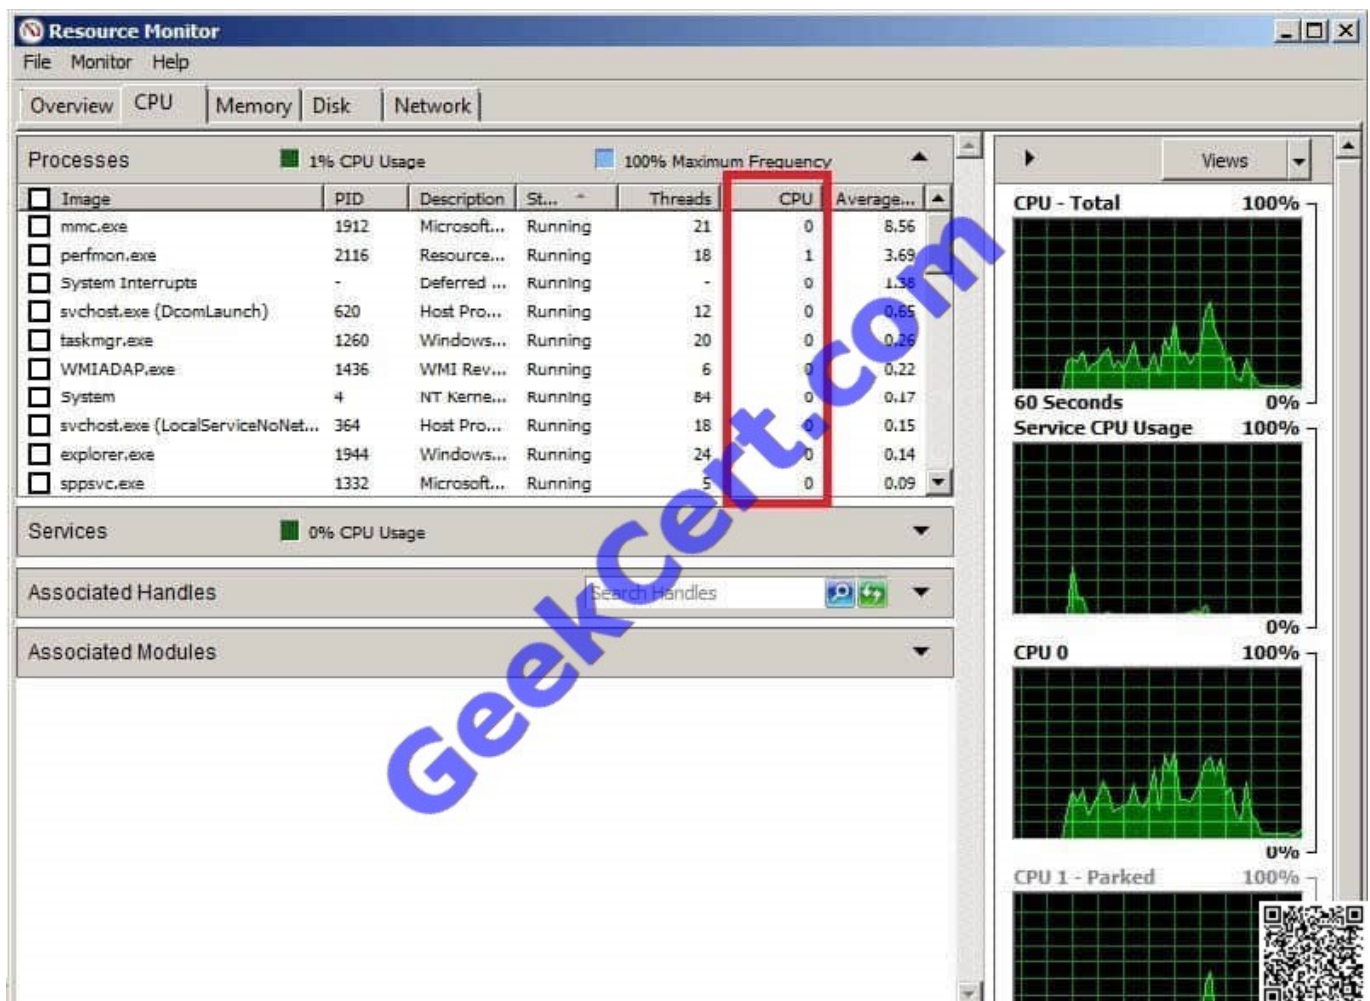

You log on to Server1 and observe real-time data indicating that the processor is operating at 100 percent of capacity.

You need to gather additional data to diagnose the cause of the problem.

What should you do?

- A. In the Performance Monitor console, create a counter log to track processor usage.
- B. In Event Viewer, open and review the application log for Performance events.
- C. In Resource Monitor, use the Resource View to see the percentage of processor capacity used by each application.
- D. In Performance Monitor, create performance counter alert that will be triggered when processor usage exceeds 80 percent for more than five minutes on Server1.

Correct Answer: C

QUESTION 4

Your network contains an Active Directory domain. All domain controllers run Windows Server 2008 R2.

The domain contains three domain controllers named DC1, DC2, and DC3. All of the domain controllers have the DNS server role installed.

You create a new Active Directory-integrated DNS zone on DC1. You need to ensure that the zone is only replicated to DC1 and DC3. The solution must ensure that all zone replication traffic is encrypted.

What should you do?

To answer, move the appropriate actions from the Possible Actions list to the Necessary Actions area and arrange them in the correct order.

Select and Place:

Possible Actions	Necessary Actions
Change the zone type.	
Create a primary zone.	
Create a secondary zone.	
Modify the zone transfer settings.	
Change the zone replication scope.	
Create an application directory partition.	
Add a replica to the application directory partition.	

Correct Answer:

Possible Actions	Necessary Actions
Change the zone type.	Create an application directory partition.
Create a primary zone.	Change the zone replication scope.
Create a secondary zone.	Add a replica to the application directory partition.
Modify the zone transfer settings.	

QUESTION 5

Your network has Network Access Protection (NAP) policies deployed.

You need to identify the health agent compliance status of a client computer.

Which command should you run?

- A. net config workstation
- B. net statistics workstation
- C. netsh nap client show config
- D. netsh nap client show state

Correct Answer: D

netsh nap client show state - Displays state information, including client access restriction state, the state of installed enforcement clients and system health agents, and the client compliance and remediation results.
