Following Questions and Answers are all new published by Microsoft
Official Exam Center

QUESTION 1

Your network contains an Active Directory domain named contoso.com. All domain controllers run Windows Server 2008 R2. The network contains a DHCP server named DHCP1 on a subnet named Subnet1. You implement a new subnet

named Subnet2. Subnet2 contains a server named Server1. On DHCP1, you create a DHCP scope for Subnet2.

You need to configure Server1 to ensure that the client computers on Subnet2 can receive IP addresses from DHCP1.

What should you install on Server1?

A. the Application Server server role

B. the DHCP server role

C. the Network Policy Server (NPS) role service

D. the Routing and Remote Access service (RRAS) role service

Correct Answer: D

QUESTION 2

Your network contains a server that runs Windows Server 2008 R2. You plan to create a custom script. You need to ensure that each time the script runs, an entry is added to the Application event log. Which tool should you use?

A. Eventcreate

B. Eventvwr

C. Wecutil

D. Wevtutil

Correct Answer: A

You can create custom events in an event log by using the Eventcreate utility. This can be useful as a diagnostic tool in scripts when you record an error or event directly into the logs without using VBScript or another language to log the event. http://support.microsoft.com/kb/324145

QUESTION 3

Your network contains a DNS server named DNS1 that runs Windows Server 2008 R2. DNS1 is configured as the DNS server for contoso.com. All client computers are configured to use DNS1 for name resolution.

From a client computer, you run the Ping tool as shown in the exhibit. (Click the Exhibit button.)

```
Administrator: Command Prompt                                    _ □ ×

C:\Users\administrator.CONTOSO>ping -a 172.23.1.100

Pinging DC1 [172.23.1.100] with 32 bytes of data:
Reply from 172.23.1.100: bytes=32 time<1ms TTL=128
Reply from 172.23.1.100: bytes=32 time<1ms TTL=128
Reply from 172.23.1.100: bytes=32 time<1ms TTL=128
Reply from 172.23.1.100: bytes=32 time<1ms TTL=128

Ping statistics for 172.23.1.100:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 0ms, Maximum = 0ms, Average = 0ms
```

You need to ensure that users can use the Ping tool to resolve the IP addresses of internal servers to fully qualified domain names (FQDNs).

What should you do?

A. Create a GlobalNames zone.

B. Create a reverse lookup zone.

C. Create a forward lookup zone.

D. Enable zone transfers on the contoso.com zone.

Correct Answer: B

QUESTION 4

Your network contains a server named Server1 that runs Windows Server 2008 R2. Server1 is located in a branch office. You view the BranchCache configuration of Server1 as shown in the exhibit. (Click the Exhibit button.)

```
C:\>netsh branchcache show status detail=all

BranchCache Service Status:
Service Mode        = Local Caching
Current Status      = Running
Service Start Type  = Automatic
This machine is not configured as a hosted cache client.

Local Cache Status:
Maximum Cache Size          = 5% of hard disk
Active Current Cache Size    = 0 Bytes
Local Cache Location          = C:\Windows\ServiceProfiles\NetworkService\AppData\Lo
cal\PeerDistRepub (Default)

Publication Cache Status:
Maximum Cache Size          = 1% of hard disk
Active Current Cache Size    = 0 Bytes
Publication Cache Location  = C:\Windows\ServiceProfiles\NetworkService\AppData\L
ocal\PeerDistPub (Default)

Networking Status:
Content Retrieval URL Reservation      = Configured (Required)
Hosted Cache URL Reservation           = Configured (Not Required)
SSL Certificate Bound To Hosted Cache Port = Configured (Not Required)
Content Retrieval Firewall Rules       = Disabled  (Not Required)
Peer Discovery Firewall Rules          = Disabled  (Not Required)
Hosted Cache Server Firewall Rules     = Disabled  (Not Required)
Hosted Cache Client Firewall Rules     = Enabled   (Not Required)

C:\>_
```

You need to ensure that client computers in the branch office retrieve cached files from Server1 only. What should you do on Server1?

A. Install the BranchCache for Network Files role service.

B. Install the Services for Network File System role service.

C. Run netsh.exe branchcache set service mode=DISTRIBUTED.

D. Run netsh.exe branchcache set service mode=HOSTEDSERVER.

Correct Answer: D

QUESTION 5

Your company has a main office and two branch offices that are connected by WAN links. The main office runs the DNS Server service on three domain controllers. The zone for your domain is configured as an Active Directory-integrated zone.

Each branch office has a single member server that hosts a secondary zone for the domain. The DNS servers in the branch offices use the main office DNS server as the DNS Master server for the zone. You need to minimize DNS zone transfer traffic over the WAN links.

What should you do?

A. Decrease the Retry Interval setting in the Start of Authority (SOA) record for the zone.

B. Decrease the Refresh Interval setting in the Start of Authority (SOA) record for the zone.

C. Increase the Refresh Interval setting in the Start of Authority (SOA) record for the zone.

D. Disable the netmask ordering option in the properties of the DNS Master server for the zone.

Correct Answer: C
