QUESTION 1

You have an Exchange Server 2010 organization that contains three Mailbox servers. All Mailbox servers are members of a database availability group (DAG) and have a public folder database.

The Active Directory forest contains one site.

You create a new site and install new Exchange Server 2010 servers in the site.

You need to ensure that public folders are stored on servers in both sites.

What should you do?

A. Create a public folder database on a server in the new site. Modify the replication settings for all public folders.

B. Create a public folder database on a server in the new site. Run the Set-DatabaseAvailabilityGroup cmdlet from a server in the new site.

C. Configure clustered continuous replication (CCR) on two servers in the new site. Modify the replication settings for all public folder databases.

D. Configure standby continuous replication (SCR) on a server in the new site. Run the Enable-StorageGroupCopy cmdlet from a server in the new site.

Correct Answer: A

QUESTION 2

Your company has three departments named Sales, Marketing, and Finance.

The network contains an Active Directory domain named contoso.com. You have an Exchange Server 2010 Service Pack 1 (SP1) organization that contains the servers configured as shown in the following table.

Server name	Server role
Server1	Mailbox Hub Transport Client Access
Server2	Edge Transport

You create an Edge Subscription for Server2.

You need to prevent the company\\'s server from accepting email messages from servers on the Internet that are known to originate spam.

What should you add to the organization?

A. an accepted domain

B. a new federation trust

C. an IP Block List Provider

D. an Edge Transport rule

E. a new Send connector

F. an attachment filter entry

G. a new Edge Subscription

H. a remote domain

I. a new journal rule

J. a new Receive connector

K. a Hub Transport rule

L. a new organization relationship

Correct Answer: C

QUESTION 3

Your network contains an Active Directory forest named contoso.com. The forest contains an Exchange Server 2010 Service Pack 1 (SP1) organization. All client computers run Microsoft Office Outlook 2003.

A server named Server1 hosts all public folders.

You upgrade all of the client computers to Outlook 2010.

You need to remove all of the public folders from Server1. The solution must maximize the amount of disk space available on Server1.
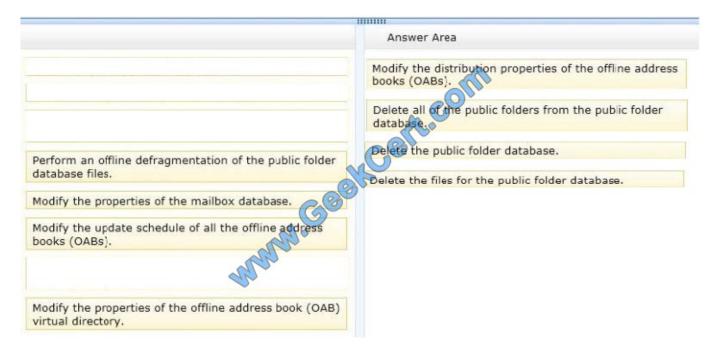

What should you do? To answer, move the four appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

	Answer Area	4 / 7

| Delete the public folder database. |
| Delete the files for the public folder database. |
| Delete all of the public folders from the public folder database. |
| Perform an offline defragmentation of the public folder database files. |
| Modify the properties of the mailbox database. |
| Modify the update schedule of all the offline address books (OABs). |
| Modify the distribution properties of the offline address books (OABs). |
| Modify the properties of the offline address book (OAB) virtual directory. |

Correct Answer:

	Answer Area
	Modify the distribution properties of the offline address books (OABs).
	Delete all of the public folders from the public folder database.
Perform an offline defragmentation of the public folder database files.	Delete the public folder database.
Modify the properties of the mailbox database.	Delete the files for the public folder database.
Modify the update schedule of all the offline address books (OABs).	
Modify the properties of the offline address book (OAB) virtual directory.	

Note: Remove the last public folder database from an organization To remove the last public folder database from an organization, perform the following steps. Step 1: Verify that no OABs in your organization are configured for public folder distribution If any offline address books (OABs) are configured for public folder distribution, you can\\'t remove the last public folder database in your organization. Step 2: Remove all public folders from the public folder database Step 3: Remove the last public folder database Step 4: Delete the public folder database files manually

Reference: Remove Public Folder Databases

QUESTION 4

Your company has offices in New York and Montreal. Each office is configured as an Active Directory site.

You have an Exchange Server 2010 Service Pack 1 (SP1) organization. The organization contains five servers. The servers are configured as shown in the following table.

Server name	Server role	Server site
Server1	Client Access Hub Transport	New York
Server2	Client Access Hub Transport	Montreal
Server3	Mailbox	New York
Server4	Mailbox	Montreal
Server5	Edge Transport	New York

Each Mailbox server contains two mailbox databases. All users have a mailbox on their local Mailbox server.

Server3 contains a public folder database.

You create a new offline address book (OAB) for each office.

You need to ensure that the users in each office download the OAB created for their respective office.

What should you modify?

A. An Attachment Filter agent

B. The Autodiscover DNS record

C. The mailbox features

D. The EWS virtual directory

E. The email address policy

F. The Client Access array

G. The Exchange ActiveSync mailbox policy

H. The mailbox databases

I. The Outlook Web App mailbox policy

Correct Answer: H

QUESTION 5

Your network contains an Active Directory forest that contains one domain. You plan to delegate the installation of an Exchange Server 2010 server to an external consultant named User1. User1 is a member of the Server Operators group and the Account Operators group only. You need to ensure that User1 can install the Exchange Server 2010 server in the forest. What should you run from the Exchange Server 2010 installation media?

A. Setup /PrepareAD

B. Setup /PrepareDomain

C. Setup /PrepareLegacyPermissions

D. Setup /PrepareSchema

Correct Answer: A

PrepareAD will run preparelegacyexchangepermissions and prepareschema if it detects they have not been run.
