QUESTION 1

You have an Exchange Server 2010 organization named contoso.com. You have a Client Access server named cas1.contoso.com that is accessible on the Internet. You access cas1.contoso.com on the Internet by using the following domain names:

mail.contoso.com

autodiscover.contoso.com

You need to ensure that mobile devices can use Auto discover on the Internet.

What should you do?

- A.
Set the external URL for Microsoft-Server-ActiveSync to \$NULL.
- B.
Set the external URL for Microsoft-Server-ActiveSync to <https://cas1.contoso.com/Microsoft-Server-ActiveSync>.
- C.
Set the external URL for Microsoft-Server-ActiveSync to [https://mail.contoso.com /Microsoft-Server-ActiveSync](https://mail.contoso.com/Microsoft-Server-ActiveSync).
- D.
Set the external URL for Microsoft-Server-ActiveSync to <http://autodiscover.contoso.com/Microsoft-Server-ActiveSync>.

Correct Answer: C

QUESTION 2

The Exchange organization contains 500 mailboxes. All of the mailboxes are stored on a mailbox database named DB1. You have a distribution group named Assistants. You have a mailbox-enabled user named Manager.

You configure the members of Assistants to moderate the email messages sent to Manager. You need to prevent the email messages sent by the Assistants members to Manager from being moderated.

Which PowerShell cmdlet should you use?

- A. New-ManagementRole
- B. New-Mailbox Audits earchLog
- C. New-RoleAssignmentPolicy
- D. New-ManagementRoleAssignment
- E. Add-MailboxPermission

- F. Add-ADPermission
- G. New-RoleGroup
- H. New-ManagementRoleEntry
- I. Set-Mailbox
- J. New-ManagementScope
- K. New-EmailAddressPolicy
- L. Set-DistributionGroup
- M. Add-ManagementRoleEntry

Correct Answer: I

If the members of a distro (Assistants in this case) moderate the Manager's emails, their emails are already bypassed, because they ARE the moderators. It's logical. There's just nothing to set up here. They are not gonna moderate each other's emails. Whenever they send an email to Manager, it goes directly to that mailbox, without any delay. I can think of only one thing here: set-mailbox manager- BypassModerationFromSendersOrMembers

QUESTION 3

You deploy a new Exchange Server 2010 organization. You send a test message to an external recipient and immediately receive the following nondelivery report (NDR):

"Delivery has failed to these recipients or groups: User1@contoso.com (user1@contoso.com). The recipient's e-mail system isn't accepting messages now. Please try resending this message later or contact the recipient directly."

You verify that you can successfully send an e-mail message to User1@contoso.com from an external e-mail system.

You need to ensure that you can send e-mails to external recipients from within the Exchange organization.

What should you create?

- A. a Send connector
- B. an accepted domain
- C. an MX record
- D. an SMTP site link

Correct Answer: A

Reference: <http://technet.microsoft.com/en-us/library/bb232045.aspx>

QUESTION 4

You plan to deploy Exchange Server 2010 on a new server. The server will be a member of a database availability group (DAG).

You need to identify the operating system that can be installed on the server to support Exchange Server 2010.

Your solution must minimize costs.

Which operating system should you identify?

- A. Windows Server 2003 R2 Standard Edition.
- B. Windows Server 2008 R2 Standard Edition.
- C. Windows Server 2003 Service Pack 2 (SP2) Enterprise Edition.
- D. Windows Server 2008 Service Pack 2 (SP2) Enterprise Edition.

Correct Answer: D

QUESTION 5

Your network contains an Exchange Server 2010 Service Pack 1 (SP1) organization named contoso.com. The organization contains two Edge Transport servers, two Hub Transport servers, two Client Access servers, and three Mailbox servers.

You need to prevent users from sending a single email message to more than 500 recipients.

What should you do?

- A. From the Exchange Management Shell, run the Set-TransportConfig cmdlet.
- B. From the Exchange Management Console (EMC), create a Hub Transport rule.
- C. From the Exchange Management Console (EMC), create an Edge Transport rule.
- D. From the Exchange Management Shell, run the Set-TransportServer cmdlet.

Correct Answer: A
