QUESTION 1

Start of repeated scenario You are an enterprise desktop support technician for Fabrikam, Inc. Active Directory Information The company has a main office and a branch office. The main office hosts all of the companys servers. The main office connects to the branch office by using a WAN link. The network contains a single Active Directory domain that has 500 users. The domain contains three domain controllers and an enterprise root certification authority (CA). All servers run Windows Server 2008 R2. All user accounts are in an organizational unit (OU) named Employees. The computer accounts for all desktop computers are in an OU named Desktops. The computer accounts for all portable computers are in an OU named Laptops. A startup script is deployed to all computers by using Group Policy objects (GPOs). Client Configurations All client computers run Windows 7 Enterprise. All users have desktop computers. All computers are members of the domain. All desktop computers use wired connections to connect to the network. All portable computers use wireless connections to connect to the network. The wireless network is secured by using EAP-TLS. Company policy states that all client computers must be configured by using DHCP. The company has an internal Web site. The Web site is configured to use SSL encryption and to require client certificates. All company users can access the internal Web site. End of repeated scenario The help desk reports that all newly installed desktop computers cannot access the companys file server. The help desk sends you the screen capture shown in the exhibit. (Click the Exhibit button.) You need to resolve the network connectivity issue. The solution must adhere to the company policy. What should you instruct help desk to do?

- A. Modify the network configuration and define the IPv4 default gateway.
- B. Modify Windows Firewall and enable File and Printer Sharing in the public profile.
- C. Modify Windows Firewall and enable File and Printer Sharing in the domain profile.

D. Modify the network configuration to automatically obtain an IP address and a DNS server address.

Correct Answer: D

QUESTION 2

Your network consists of an Active Directory domain and a DirectAccess infrastructure. You install Windows 7 on a new portable computer and join the computer to the domain. You need to ensure that the computer can establish DirectAccess connections. What should you do?

- A. Install a computer certificate.
- B. Create a new network connection.
- C. Enable the Network Discovery firewall exception.
- D. Add the computer account to the Network Configuration Operators group.

Correct Answer: A

QUESTION 3

All client computers on your company network run Windows 7. A computer is unable to connect to network resources. The configuration of the computer is as shown in the following table. You need to ensure that the computer is able to connect to network resources. What should you do?

IP address	131.107.4.254
Subnet mask	255.255.240.0
Default gateway	131.107.15.255
Preferred DNS server	131.107.3.2

- A. Change the IP address to 131.107.3.254.
- B. Change the subnet mask to 255.255.248.0.
- C. Change the default gateway to 131.107.0.1.
- D. Change the preferred DNS server to 131.107.3.1.

Correct Answer: C

QUESTION 4

You work as a desktop technician at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. All servers on the network run Windows Server 2008. All client computers run Windows 7 Enterprise.

You want to install Windows 7 on a new computer. You have a virtual hard disk (VHD) that contains a Windows 7 Enterprise installation.

You configure the computer to start from the VHD.

How can you configure the Windows 7 installation to run the out-of-box-experience (OOBE) portion of Windows Setup when the computer is started from the VHD?

- A. Copy boot.wim from the Windows 7 installation media to the VHD.
- B. Copy install.wim from the Windows 7 installation media to the VHD.
- C. Start the computer using Windows PE then run Diskpart.exe.
- D. Use ImageX to mount the Windows 7 image and apply install.wim from the Windows 7 installation media to it.
- E. Use ImageX to mount the Windows 7 image and apply boot.wim from the Windows 7 installation media to it.

Correct Answer: D

QUESTION 5

You have a computer that runs Windows 7. The IPv6 address of the computer is configured automatically. You need to identify the IPV6 address of the computer. What should you do?

- A. At the command prompt, run Netstat.
- B. At the command prompt run Net config.
- C. From the network connection status, click Details.
- D. From network connection properties, select Internet Protocol Version 6 (TCP/IPv6) and click Properties.

Correct Answer: C
