### QUESTION 1

You support client Windows 8.1 computers. Some of these computers have the Application Virtualization (App-V) client installed. Multiple App-V applications are published on the network.

A user reports that it is taking a long time to launch App-V applications. You discover that the user has a roaming profile on the computer.

You need to minimize the time that is required for the user to start App-V applications on her computer.

What should you do?

- A. Change the location of the App-V client cache file.
- B. Change the user profile to Local.
- C. Increase the size of the App-V client cache.
- D. Change the user profile to Mandatory.

Correct Answer: B

Explanation: The current App-V Client VFS driver cannot write to network locations, so the App-V Client detects the presence of folder redirection and copies the data on the local drive during publishing and when the virtual environment starts. After the user closes the App-V application and the App-V Client closes the virtual environment, the local storage of the VFS AppData is copied back to the network, enabling roaming to additional machines, where the process will be repeated. The detailed steps of the processes are: During publishing or virtual environment startup, the App-V Client detects the location of the AppData directory. If the roaming AppData path is local or ino AppData\Roaming location is mapped, nothing happens. If the roaming AppData path is not local, the VFS AppData directory is mapped to the local AppData directory.

Note: App-V 5.0 SP2 supports folder redirection of the roaming AppData folder (%AppData%). When the virtual environment is started, the roaming AppData state from the user\\'s roaming AppData directory is copied to the local cache. Conversely, when the virtual environment is shut down, the local cache that is associated with a specific user\\'s roaming AppData is transferred to the actual location of that user\\'s roaming AppData directory.

### QUESTION 2

You have client Windows 8.1 Enterprise computers.

Your company purchases a subscription to Windows Intune.

You deploy the Windows Intune agent to all of the computers.

You need to uninstall a Microsoft update that was installed before the Windows Intune agent was installed. The solution must minimize administrative effort.

What should you do?

- A. Create a Group Policy object (GPO) that runs wusa.exe by using a startup script.

- B. From Windows Intune, create a new automatic approval rule.
- C. From Windows Intune, click New updates to approve.
- D. Create a Group Policy object (GPO) that runs msiexec.exe by using a startup script.

Correct Answer: C

Explanation: <http://technet.microsoft.com/en-us/library/hh456367.aspx> [http://www.microsoft.com/en-us/server-cloud/products/windows-intune/support.aspx#fbid=I\\_-Vds59NJT](http://www.microsoft.com/en-us/server-cloud/products/windows-intune/support.aspx#fbid=I_-Vds59NJT) <http://support.microsoft.com/kb/934307> <http://www.microsoft.com/resources/documentation/windows/xp/all/proddocs/en-us/msiexec.msp?mfr=true>

### QUESTION 3

You administer Windows 8.1 Enterprise desktop computers that are members of an Active Directory domain.

You want to create an archived copy of user profiles that are stored on the desktops. You create a standard domain user account to run a backup task.

You need to grant the backup task user account access to the user profiles.

What should you do?

- A. Add the backup task account to the Backup Operators group on every computer.
- B. Set the backup task account as NTFS owner on all the profiles.
- C. Add the backup task account to the Remote Management Users group on a domain controller.
- D. Add the backup task account to the Backup Operators group on a domain controller.

Correct Answer: D

---

### QUESTION 4

You support computers that run Windows 8 Enterprise and are members of a workgroup.

Users are able to download and install any app from Windows Store.

You need to ensure that only approved apps can be installed from Windows Store. What should you do?

- A. Configure an AppLocker Packaged app rule.
- B. Enable Windows SmartScreen and select the Get administrator approval before running an unrecognized app from the Internet option.
- C. Configure an AppLocker Publisher rule.
- D. Configure a Software Restriction Policy Certificate rule.

Correct Answer: A

## QUESTION 5

At work, you use a desktop computer that runs Windows 8 Pro. At home, you use a laptop that runs Windows 8. You use the same Microsoft account to log on to both computers.

You want to use the same settings for both computers.

You need to ensure that all computer settings, including stored passwords, are synced between the computers.

What should you do?

- A. Add both computers to the same Active Directory domain.
- B. Use the same local accounts for both computers.
- C. Install SkyDrive for Windows on both computers.
- D. Designate both computers as trusted PCs.

Correct Answer: D

\*

Microsoft has integrated its cloud computing features into much of Windows 8. The focal point of that integration is the soon to be re-branded Windows Live service--use a Windows Live account as your login, and you can synchronize much of the information associated with your account to all your Windows devices through the cloud. Or at least, that's the goal.

\*

Setting up for synchronization starts when you configure your user account. At installation, Windows 8 prompts you for a Windows Live account. You can create a new Live account or use an existing one for your user credentials, or choose to bypass this and set up a local-only user account--but you won't be able to leverage the synchronization features if you do. You can also opt out later and switch to a local-only account through Windows 8's settings menu.

When you set up your user account--either at install time or from the PC settings menu afterward--you'll be prompted to either use an existing Live account email address or enter a new one <http://technet.microsoft.com/en-us/windowsserver/bb250462%28v=vs.71%29.aspx>
