QUESTION 1

Hardware build name	USB port	Processor	Memory	Firmware
Hardware 1	USB 3.0	32-bit	1 GB	BIOS
Hardware 2	USB 3.0	64-bit	2 GB	BIOS
Hardware 3	USB 3.0	64-bit	4 GB	UEFI
Hardware 4	USB 2.0	32-bit	4 GB	UEFI
Hardware 5	USB 2.0	64-bit	2 GB	UEFI

Your company has five hardware builds for client computers. The hardware builds are configured as shown in the following table.

You plan to provide some users with Windows To Go disks that contain a corporate image of the 64-bit version of Windows 8 Enterprise and several line-of-business (LOB) applications.

In the table below, identify whether the hardware build is compatible or incompatible with the Windows To Go disks. Make only one selection in each row. Each correct selection is worth one

point.

Hot Area:

Computer build	Compatible	Incompatible
Hardware1	<input type="radio"/>	<input type="checkbox"/>
Hardware2	<input type="checkbox"/>	<input type="checkbox"/>
Hardware3	<input type="radio"/>	<input type="checkbox"/>
Hardware4	<input type="radio"/>	<input type="checkbox"/>
Hardware5	<input type="radio"/>	<input type="checkbox"/>

Correct Answer:

Computer build	Compatible	Incompatible
Hardware1	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Hardware2	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Hardware3	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Hardware4	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Hardware5	<input checked="" type="checkbox"/>	<input type="checkbox"/>

* Windows To Go is a feature in Windows 8 Enterprise that allows Windows 8 Enterprise to boot and run from mass storage devices such as USB flash drives and external hard disk drives.

* 64-bit Windows 8 Enterprise cannot run on 32-bit processors

* Both USB 2.0 and USB 3.0 work fine with Windows to Go.

* The Unified Extensible Firmware Interface (UEFI) (pronounced as an initialism U-E-F-I or like "unify" without the n) is a specification that defines a software interface between an operating system and platform firmware. UEFI is meant to replace the Basic Input/Output System (BIOS) firmware interface, present in all IBM PC-compatible personal computers. In practice, most UEFI images provide legacy support for BIOS services

* The Windows 8 Enterprise 2 GB RAM requirement is met by the 64-bit profiles: http://technet.microsoft.com/en-us/library/hh831833.aspx#wtg_prep_intro

QUESTION 2

You administer Windows 8.1 Enterprise computers that are members of a workgroup.

Company policy requires that all computers receive the latest updates from a Windows Update. Only updates that are digitally signed by Microsoft are installed.

You need to configure the computers to automatically receive and apply the updates.

What should you do first?

- A. Configure the Configure Automatic Updates policy setting to Allow local admin to choose setting.
- B. Configure the Specify intranet Microsoft update service location policy setting to use the local WSUS server.
- C. Enable the Allow signed updates from an intranet Microsoft update service location policy setting.
- D. Configure the Configure Automatic Updates policy setting to Auto download and schedule for install.

Correct Answer: D

Explanation: Group Policy setting: Auto download and schedule the install You can specify the schedule by using the options in this Group Policy setting. If no schedule is specified, the default schedule for all installations will be every day at

3:00 A.M. If any updates require a restart to complete the installation, Windows will restart the computer automatically. (If a user is signed in to the computer when Windows is ready to restart, the user will be notified and given the option to delay the restart.)

Reference: Step 5: Configure Group Policy Settings for Automatic Updates <https://technet.microsoft.com/en-us/library/dn595129.aspx>

QUESTION 3

You have client computers that run Windows 8 Pro.

You need to recommend a solution to roll back the Windows Defender engine and the malware signature files on the computers. The solution must minimize administrative effort.

What should you include in the recommendation?

- A. File History
- B. the Program and Features Control Panel item
- C. Windows 7 File Recovery
- D. System Restore points

Correct Answer: D

Explanation: A restore point is a representation of a stored state of your computer's system files. You can use a restore point to restore your computer's system files to an earlier point in time. <http://technet.microsoft.com/en-us/library/fff398019.aspx>

QUESTION 4

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You support Windows 8.1 Enterprise desktop computers and tablets. All of the computers are able to connect to your company network from the Internet by using DirectAccess.

Your company wants to deploy a new application to the tablets. The deployment solution must meet the following requirements:

Users have offline access to the application only within the first seven days following their latest online session. The application uses the least amount of disk space. You need to deploy the new application to the tablets.

What should you do?

- A. Deploy the application as an Application Virtualization (App-V) package. Install the App-V 4.6 client on the tablets.

- B. Deploy the application as a published application on the Remote Desktop server. Create a Remote Desktop connection on the tablets.
- C. Install the application on a local drive on the tablets.
- D. Install the application in a Windows To Go workspace.
- E. Install Hyper-V on tablets. Install the application on a virtual machine.
- F. Publish the application to Windows Store.
- G. Install the application within a separate Windows 8.1 installation in a virtual hard disk (VHD) file. Configure the tablets with dual boot.
- H. Install the application within a separate Windows 8.1 installation in a VHDX file. Configure tablets with dual boot.

Correct Answer: B

QUESTION 5

You are an application developer for a federal government agency. You maintain a legacy application that the agency originally developed for Windows 2000. The agency is upgrading all desktop computers to Windows 8.1.

The legacy application does not run on Windows 8.1. You use the Application Compatibility Toolkit (ACT) to create a shim.

You need to deploy the shim to all Windows 8.1 computers.

What should you do?

- A. Run the sdbinst.exe utility on each computer to install the shim locally.
- B. Configure a Group Policy to install the shim with user privileges.
- C. Install the shim on all Windows XP computers prior to the Windows 8.1 upgrade.
- D. Install the shim with a PowerShell script by using the ACT PowerShell add-in.

Correct Answer: D

Explanation: Deploying a custom shim database to users requires the following two actions:

*

Placing the custom shim database (*.sdb file) in a location to which the user's computer has access (either locally or on the network)

*

Calling the sdbinst.exe command-line utility to install the custom shim database locally While any approach that completes these two actions will work, customers commonly use one of the following two approaches:

*

Packaging the *.sdb file and a script in an .msi file and then deploying the .msi file, making sure to mark the custom

action not to impersonate the calling user. For example, if using Microsoft Visual Basic?Scripting Edition (VBScript) script, the custom action type would be `msidbCustomActionTypeVBScript + msidbCustomActionTypeInScript + msidbCustomActionTypeNoImpersonate = 0x0006 + 0x0400 + 0x0800 = 0x0C06 = 3078 decimal.`

*

Placing the *.sdb file on a network share, and then calling a script on target computers, making sure to call the script at a time when it will receive elevated rights (for example, from a computer start-up script instead of a user log-in script). Reference: Custom Shim Database Deployment [https://technet.microsoft.com/en-us/library/dd837647\(v=ws.10\).aspx](https://technet.microsoft.com/en-us/library/dd837647(v=ws.10).aspx)
