QUESTION 1

You administer laptops that run Windows 8 Enterprise and are members of an Active Directory domain.

Users travel frequently and access domain resources from inside client networks or from their home network. You want to manage the laptops when they are connected to the company network from the external networks.

You need to ensure that the laptops can be managed and maintained while users are not logged on to the computers. Which of the following should you recommend?

- A. Remote Assistance
- B. Remote Desktop
- C. Windows Remote Management (WinRM)
- D. DirectAccess

Correct Answer: D

DirectAccess, introduced in the Windows 7 and Windows Server 2008 R2 operating systems, allows remote users to securely access enterprise shares, web sites, and applications without connecting to a virtual private network (VPN). DirectAccess establishes bi-directional connectivity with a user's enterprise network every time a users DirectAccess-enabled portable computer connects to the Internet, even before the user logs on. Users never have to think about connecting to the enterprise network and IT administrators can manage remote computers outside the office, even when the computers are not connected to the VPN. Forefront Unified Access Gateway (UAG) 2010 extends the benefits of DirectAccess across your infrastructure, enhancing scalability and simplifying deployment and ongoing management. <http://technet.microsoft.com/en-us/network/dd420463.aspx>

QUESTION 2

A company has client computers that run Windows 8. Each employee has one client computer at the office. Some employees also have personal computers at home.

The company has applications that run only on Windows 8.

You need to deploy Windows To Go so that employees can run the applications on their home computers.

Which two command-line tools should you use? (Each correct answer presents part of the solution. Choose two.)

- A. ImageX
- B. bcdboot
- C. BdeHdCfg
- D. isoburn

Correct Answer: AB

If you get DISM as an additional option in this question, I would select DISM. DISM is already integrated in the Windows 8 OS and it is the newer feature than ImageX. To use ImageX we have to install Windows 8 AIK first.

QUESTION 3

A company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 8 and are members of the domain. Client computers maintain a list of sites in the Internet Explorer Restricted Sites security zone.

Users of one client computer are able to download and install an application from a site within the Restricted Sites zone.

You need to ensure that users of the computer can install applications only from sites that are not in the Restricted Sites zone.

What should you do?

- A. Run the Set-ExecutionPolicy Windows PowerShell cmdlet.
- B. Configure the Software Restriction Policy settings in the local Group Policy of the computer.
- C. Add the blocked application as a software restriction policy to the GPO that configures AppLocker.
- D. Run the Get-AppLockerPolicy Windows PowerShell cmdlet.
- E. Add the blocked application as an additional AppLocker rule to the GPO that configures AppLocker.

Correct Answer: B

Only Software Restriction policy allows for the control of applications from a network zone; AppLocker does not.

QUESTION 4

You have computers that run Windows 8 Enterprise. Microsoft BitLocker Administration and Monitoring (MBAM) is deployed on your network on a server named MBAM1.

Company policy requires that within 2 hours of being started, computers that have the MBAM client installed prompt users to enable BitLocker.

You need to make changes to the Configure MBAM Services Group Policy settings.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Set MBAM Recovery and Hardware service endpoint to MBAM1.
- B. Set Select Bitlocker Recovery Information to store to Recovery password only.
- C. Set Enter status reporting frequency (in minutes) to 120.
- D. Set Select Bitlocker Recovery Information to store to Recovery password and key package.
- E. Set Enter client checking status frequency (in minutes) to 120.
- F. Set MBAM Status reporting endpoint to MBAM1.

Correct Answer: AF

-

MBAM Recovery and Hardware service endpoint. This is the first policy setting that you must configure to enable the MBAM Client BitLocker encryption management. For this setting, enter the endpoint location similar to the following example: `http://:/MBAMRecoveryAndHardwareService/CoreService.svc`.

-

MBAM Status reporting service endpoint. You must configure this setting to enable MBAM Client BitLocker encryption management. Enter an endpoint location that is similar to the following example: `http://:/MBAMComplianceStatusService/StatusReportingService.svc`. NOTE: Not required to configure "Enter client checking status frequency" as it is set to 90 minutes by default 1.0 <http://technet.microsoft.com/en-us/library/jj571500.aspx> 2.0 <http://technet.microsoft.com/en-us/library/dn186164.aspx> <http://technet.microsoft.com/en-us/library/dn645301.aspx>

QUESTION 5

An organization has client computers that run Windows 7. You upgrade the client computers to Windows 8 without migrating the local user profiles.

You install the Windows Assessment and Deployment Kit (ADK) in the environment.

You need to migrate the user profiles from the Windows 7 installation to the Windows 8 installation.

What should you do first on each client computer?

- A. Copy the Default Profile to a folder on drive C.
- B. Run Windows Easy Transfer and select the user profile to migrate.
- C. Run the scanstate command.
- D. Run the loadstate command.
- E. Run the ImageX command.

Correct Answer: C
