### QUESTION 1

You have a computer that has the disk configuration shown in the following table:

Disk controller	Size	Purpose
0	128 GB	System and boot
1	256 GB	Not applicable
2	256 GB	Not applicable
3	256 GB	Not applicable

You need to configure a storage space that will provide data redundancy if a disk fails.

The solution must minimize impact if a disk fails.

Which resiliency type should you choose?

- A. three-way mirror
- B. two-way mirror
- C. simple
- D. parity

Correct Answer: B

### QUESTION 2

You have Windows 10 Enterprise client computers. The computers use Microsoft Application Virtualization (App-V) to deploy apps.

You discover that when users sign in to their computer, the App-V client refreshes all of the published packages.

You need to prevent the App-V client from refreshing the published packages at sign-in. The solution must ensure that the users can use App-V applications.

Which Windows PowerShell cmdlet should you run?

- A. Set-AppvClientPackage
- B. Set-AppvClientConfiguration
- C. Set-AppvPublishingServer
- D. Set-AppvClientMode

Correct Answer: C

**QUESTION 3**

You are a desktop administrator for a small company and have just upgraded two laptops from Windows 8 to Windows 10 Enterprise.

When the computers were running Windows 8, Backup and Restore was active and was scheduled to back up data files two times a day to an external hard disk.

You need to enable File History so that copies of files are saved to a network drive.

Which three actions should you perform in sequence? To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

**Actions**

**Answer Area**

- Select Network Drive.
- Make Changes to Advanced Settings.
- Turn on File History.
- Disable the Windows 8 Backup schedule.

Correct Answer:

**Actions**

**Answer Area**

- 
- 
- 
- Disable the Windows 8 Backup schedule.

- Make Changes to Advanced Settings.
- Select Network Drive.
- Turn on File History.

**QUESTION 4**

You support Windows 10 Enterprise computers that are members of an Active Directory domain. All of the computers have a dedicated recovery partition.

A computer indicates that the domain is unavailable. The password of a local administrator account on the computer is unknown. You need to reset the password for the local administrator account on the computer.

What should you do?

- A. Run Windows To Go workspace from a USB flash drive.
- B. Run the Windows 10 Enterprise installation wizard from a USB flash drive.
- C. Run Microsoft Diagnostic and Recovery Tool (DaRT) from a USB flash drive.
- D. Run Windows Recovery Environment (WinRE) from a recovery partition.

Correct Answer: C

### QUESTION 5

You have an Active Directory domain. All of the client computers in the domain run Windows 10 Enterprise.

You need to configure the client computers to download updates from a Windows Server Update Service server.

Which two settings should you configure? To answer, select the appropriate settings in the answer area.

Hot Area:

Setting	State	Comment
Configure Automatic Updates	Not configured	No
Defer Upgrade	Not configured	No
Delay Restart for scheduled installations	Not configured	No
Do not adjust default option to 'Install Updates and Shut Do...	Not configured	No
Do not connect to any Windows Update Internet locations	Not configured	No
Do not display 'Install Updates and Shut Down' option in Sh...	Not configured	No
Enable client-side targeting	Not configured	No
Enabling Windows Update Power Management to automati...	Not configured	No
No auto-restart with logged on users for scheduled automat...	Not configured	No
Re-prompt for restart with scheduled installations	Not configured	No
Reschedule Automatic Updates scheduled installations	Not configured	No
Specify intranet Microsoft update service location	Not configured	No
Turn on recommended updates via Automatic Updates	Not configured	No

Correct Answer:
