QUESTION 1

You have a deployment of System Center Configuration Manager (Current Branch).

You need to ensure that help desk users can use the Configuration Manager console to remotely control Configuration Manager clients.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Add the help desk users to the local Administrators group on each client computer.

B. Enable Remote Desktop on the client computers.

C. Configure a client settings policy.

D. Allow connections to TCP port 3389 on the client computers.

E. Allow connections to TCP port 2701 on the client computers.

Correct Answer: CD

https://technet.microsoft.com/en-us/library/bb632618.aspx

QUESTION 2

You have a deployment of System Center Configuration Manager (Current Branch).

You need to back up the CD.Latest folder and the Configuration Manager database. The solution must meet the following requirements:

Compress the backup of the Configuration Manager database.

Ensure that the backups can be restored to a consistent state.

Which type of backups should you use? To answer, drag the appropriate options to the correct content types. Backup type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view

content.

NOTE: Each correct selection is worth one point.

Select and Place:

Backup Types

A full database backup in Microsoft SQL Server
A maintenance task backup in Configuration Manager
A system state backup in Windows Server Backup

Answer Area

The CD.Latest folder: | A maintenance task backup in Configuration Manager |

The Configuration Manager database: | A full database backup in Microsoft SQL Server |

Correct Answer:

Backup Types

A system state backup in Windows Server Backup

Answer Area

The CD.Latest folder: | A maintenance task backup in Configuration Manager |

The Configuration Manager database: | A full database backup in Microsoft SQL Server |

QUESTION 3

You have a deployment of System Center Configuration Manager (Current Branch).

You add the cloud management gateway connector point to the deployment.

Which site system role can be configured to receive the traffic from the cloud management gateway?

A. Service connection point

B. Distribution point

C. Management point

D. Endpoint Protection point

E. Asset Intelligence synchronization point

F. Fallback status point

Correct Answer: C

QUESTION 4

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is

exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise. All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named

Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

View the Upgrade Readiness data of all the client computers.

Deploy App1 to the client computers in the marketing department.

Deploy App2 to the client computers in the human resources (HR) department.

Monitor the usage of App3.

Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.

Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to create the DNS record in adatum.com for the cloud-based distribution point.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Record type:

- Alias(CNAME)
- Host (A or AAAA)
- Host information (HINFO)
- Service location (SRV)
- Well known services (WKS)

Name to reference:

- d1594d4527614a09b934d470.azure.com

QUESTION 5

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is

exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise, Semi-Annual Channel (Targeted). All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the

sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

View the Upgrade Readiness data of all the client computers.

Deploy App1 to the client computers in the marketing department.

Deploy App2 to the client computer in the human resources (HR) department.

Monitor the usage of App3.

Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.

Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to meet the requirements for App3.

What should you configure?

A. a configuration baseline

B. software metering

C. a software inventory

D. an application

E. a computer agent

Correct Answer: B
