QUESTION 1

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is

exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise, Semi-Annual Channel (Targeted). All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the

sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

View the Upgrade Readiness data of all the client computers.

Deploy App1 to the client computers in the marketing department.

Deploy App2 to the client computers in the human resources (HR) department.

Monitor the usage of App3.

Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.

Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to create the Upgrade Readiness report.

- Which Group Policy object (GPO) setting should you configure?
- A. Diagnostics: Configure Scenario Execution Level
- B. Specify intranet Microsoft update service location
- C. Configure the Commercial ID
- D. Configure forwarder resource usage
- E. Audit Other Account Logon Events
- Correct Answer: C

QUESTION 2

You deploy System Center Configuration Manager (Current Branch).

You need to manage the malware settings for Configuration Manager clients.

What should you do first?

- A. Add an Endpoint Protection point.
- B. Disable Windows Defender.
- C. Create a configuration baseline.
- D. Create a compliance policy.
- Correct Answer: A

QUESTION 3

You have a deployment of System Center Configuration Manager (Current Branch). The domain contains the users shown in the following table.

User name	Members of
User1	Domain Users
Uscr2	Help Desk Users
User3	Enterprise Admins
User4	Support Techs

Support Techs is a member of the Administrators group on each client computer. Help Desk Users is a member of the Power Users group on each client computer.

You need to deploy Configuration Manager agents by using a client push installation. The solution must use the principle of least privilege.

Which user should you configure as the client push installation account?

A. User1

B. User2

- C. User3
- D. User4
- Correct Answer: D

QUESTION 4

You have a deployment of System Center Configuration Manager (Current Branch).

You use Configuration Manager to deploy Windows 10.

You discover that newly deployed images of Windows 10 are missing several Windows 10 updates.

When you attempt to deploy the updates by using the Schedule Updates Wizard, the process fails, and you receive the following error message: "Failed to apply one or more updates."

Which log file should you view to get additional information about the failure?

- A. ScanAgent.log
- B. UpdatesHandler.log
- C. OfflineServicingMgr.log
- D. UpdatesDeployment.log
- E. WUAHandler.log

Correct Answer: C

QUESTION 5

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is

exactly the same in each question in this series.

Start of repeated scenario.

You work for a company named ADatum Corporation.

The ADatum network contains an Active Directory domain named adatum.com.

You have a partner company named Contoso, Ltd. The Contoso network contains an Active Directory domain named adatum.com.

All the client computers at both companies run Windows 10.

Each company has a deployment of System Center Configuration Manager (Current Branch).

ADatum has sales and IT departments. ADatum has a collection for each department.

Contoso has research, marketing, and human resources (HR) departments. Contoso has a collection for each department.

ADatum purchases Contoso.

You configure on-premises mobile device management (MDM) in adatum.com. You enroll the client computers in the IT department into on-premises MDM.

You configure hybrid MDM in contoso.com.

End of repeated scenario.

You need to enroll the client computers in the sales department into MDM.

What should you do on the sales department computers?

- A. Install the Configuration Manager client.
- B. Run the Add-Computer cmdlet.
- C. Use the Settings app to connect the computers to a work or school account.
- D. Install the Microsoft Intune software client.

Correct Answer: C
