### QUESTION 1

You create the working directories for a custom Windows Preinstallation Environment (Windows PE) image.

You need to create an ISO image of Windows PE that can be written to a DVD. The ISO image must be bootable.

Which command should you use?

- A. bcdboot.exe
- B. oscdimg.exe
- C. bootsect.exe
- D. etfsboot.exe

Correct Answer: B

---

### QUESTION 2

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have an image of Windows 10 that you plan to deploy to a new computer.

You need to add the latest cumulative updates to the image.

Which parameter should you specify when you run `dism.exe`?

- A. /Add-Capability
- B. /Add-Driver
- C. /Add-Package
- D. /Add-ProvisionedAppxPackage
- E. /Apply-CustomDataImage
- F. /Apply-Image
- G. /Apply-Unattend
- H. /Export-Image

Correct Answer: C

References: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/servicing-the-image-with-windows-updates-sxs>

---

### QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You mount an image of Windows 10.

You download 10 Windows 10 update packages to separate folders. Some of the update packages contain dependencies to the other update packages. You are unaware of the specific dependencies.

You need to add all the update packages to the image in the correct order.

Solution: You run `dism.exe/Get-Packages`, and then you pipe the output to `dism.exe/Add-Package`.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

References: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/add-or-remove-packages-offline-using-dism>

---

### QUESTION 4

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You have a computer named Computer1 that runs Windows 10. Computer1 has the Windows Assessment and Deployment Kit (Windows ADK) installed.

You are building a new image of Windows 10.

You copy the installation media for Windows 10 to Computer1.

You need to add drivers to the Windows 10 image.

What should you do first?

A. Mount the Install.wim file.

B. Mount the Boot.wim file.

- C. Modify the Winpeshl.ini file.
- D. Create an answer file.
- E. Modify the Windows.ini file.
- F. Create a provisioning package.
- G. Load a catalog file (.clg).
- H. Create a cabinet file (.cab).

Correct Answer: A

---

### QUESTION 5

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You have an image of Windows 10 that contains a recovery image.

You modify the recovery image.

You need to remove all the unnecessary resource files from the recovery image.

Which parameter should you specify when you run dism.exe?

- A. /Add-Capability
- B. /Add-Driver
- C. /Add-Package
- D. /Add-ProvisionedAppxPackage
- E. /Apply-CustomDataImage
- F. /Apply-Image
- G. /Apply-Unattend
- H. /Export-Image

Correct Answer: H
