QUESTION 1

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Hyper-V host named Server1. Server1 connects to your corporate network. Server1 has the virtual switches configured as shown in the following table.

Virtual switch name	Virtual switch type
Private1	Private
Internal1	Internal
External1	External

Server1 has two virtual machines named VM1 and VM2 that run Windows Server 2016. VM1 connects to Private1. VM2 has two network adapters.

You need to ensure that VM1 connects to the corporate network by using NAT.

Solution: You connect VM2 to Private1 and External1. You run the New-NetNatIpAddress and the New-NetNat cmdlets on VM2. You configure VM1 to use VM2 as the default gateway.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 2

You network contains an Active Directory domain. The domain contains two DNS servers named Server1 and Server2. Server1 has a DNS zone named contoso.com that has the following configurations:

1.

Dynamic updates: Secure only

2.

Scavenge stale resource records: Enabled

3.

Scavenging period: 1 day

4.

No-refresh interval: 3 days

5.

Refresh interval: 7 days

After how many days will a dynamic record become stale if the timestamp is NOT updated?

A. 1 day

B. 3 days

C. 7 days

D. 10 days

E. 11 days

Correct Answer: D

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some questions sets might have more than one correct solutions,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016. Server1 is configured as a VPN server.

Server1 is configured to allow domain users to establish VPN connections from 06:00 to 18:00 everyday of the week.

You need to ensure that domain users can establish VPN connections only between Monday and Friday.

Solution: From Network Policy Server, you modify the Network Policies on Server1.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

QUESTION 4

HOTSPOT

Your network contains an Active Directory domain named contoso.com. The domain contains four servers named Server1, Server2, Server3, and Server4 than run Windows Server 2016.

Server1 has IP Address Management (IPAM) installed. Server2, Server3, and Server4 have the DHCP Server role installed. IPAM manages Server2, Server3, and Server4.

A domain user named User1 is a member of the groups shown in the following table.

Server name	Group
Server1	IPAM Users
Server2	DHCP Administrators
Server3	DHCP Users
Server4	Users

Which actions can User1 perform? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Actions	Can be performed by User1	Cannot be performed by User1
Use the DHCP console on Server1 to create a DHCP scope on Server2.	○	C
Use the DHCP console on Server1 to create a DHCP scope on Server3.	○	C
Use the IPAM node of Server Manager on Server1 to create a DHCP scope on Server4.	○	C

Correct Answer:

Answer Area

Actions	Can be performed by User1	Cannot be performed by User1
Use the DHCP console on Server1 to create a DHCP scope on Server2.	○	C
Use the DHCP console on Server1 to create a DHCP scope on Server3.	○	C
Use the IPAM node of Server Manager on Server1 to create a DHCP scope on Server4.	○	C

QUESTION 5

Your network contains three subnets, a production subnet that contains production servers, a development network that contains development servers, and a client network that contains client computers.

The development network is used to test applications and reproduces servers that are located on the production network. The development network and the production network use the same IP address range.

A developer has a client computer on the client network. The developer reports that when he attempts to connect to the IP address 10.10.1.6 from his computer, he connects to a server on the production network. You need to ensure that

when the developer connects to 10.10.1.6, he connects to a sever on the development network

Which cmdlet should you use?

A. New-NetNeighbor

B. New-NetRoute

C. Set-NetTcpSetting

D. Set-NetNeighbir

Correct Answer: B
