-  **800,000+** Satisfied Customers

### QUESTION 1

You have a server named Server1 that has a Server Core installation of Windows Server 2016. Server1 is configured to obtain an IP address automatically.

You need to configure the IPv4 address, netmask, and default gateway manually for a network interface named Ethernet on Server1.

What should you run?

- A. ipconfig.exe
- B. New-NetIPAddress
- C. Set-NetAdapter
- D. Set-NetIPv4Protocol

Correct Answer: B

<https://docs.microsoft.com/en-us/powershell/module/nettcpip/new-netipaddress?view=win10-ps>

### QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10.

On Server1, you have the following zone configuration.

ZoneName	ZoneType	IsAutoCreated	IsDnsIntegrated	IsReverseLookupZone	IsSigned
_msdcs.contoso.com	Primary	False	True	False	False
0.in-addr.arpa	Primary	True	False	True	False
127.in-addr.arpa	Primary	True	False	True	False
255.in-addr.arpa	Primary	True	False	True	False
adatum.com	Forwarder	False	False	False	False
contoso.com	Primary	False	True	False	False
fabrikam.com	Primary	False	True	False	True
TrustAnchors	Primary	False	True	False	False

You need to ensure that all of the client computers in the domain perform DNSSEC validation for the fabrikam.com namespace.

Solution: From a Group Policy object (GPO) in the domain, you modify the Network List Manager Policies. Does this meet the goal?

- A. Yes

B. No

Correct Answer: B

Network List Manager Policies are security settings that you can use to configure different aspects of how networks are listed and displayed on one computer or on many computers.

Network List Manager Policies are not related to DNSSEC.

---

### QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains a member server named Server1 that runs Windows Server 2016 and has the DNS Server role installed. Automatic scavenging of state records is

enabled and the scavenging period is set to 10 days.

All client computers dynamically register their names in the contoso.com DNS zone on Server1.

You discover that the names of multiple client computers that were removed from the network several weeks ago can still be resolved.

You need to configure Server1 to automatically remove the records of the client computers that have been offline for more than 10 days.

Solution: You modify the Zone Aging/Scavenging properties of the zone.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

[https://technet.microsoft.com/en-us/library/cc771362\(v=ws.10\).aspx](https://technet.microsoft.com/en-us/library/cc771362(v=ws.10).aspx)

---

### QUESTION 4

Your network contains three subnets, a production subnet that contains production servers, a development network that contains development servers, and a client network that contains client computers.

The development network is used to test applications and reproduces servers that are located on the production network. The development network and the production network use the same IP address range.

A developer has a client computer on the client network. The developer reports that when he attempts to connect to the IP address 10.10.1.6 from his computer, he connects to a server on the production network. You need to ensure that

when the developer connects to 10.10.1.6, he connects to a sever on the development network

Which cmdlet should you use?

- A. New-NetNeighbor
- B. New-NetRoute
- C. Set-NetTcpSetting
- D. Set-NetNeighbir

Correct Answer: B

#### QUESTION 5

**Start of repeated scenario**

Your network contains an Active Directory domain named contoso.com. The functional level of the domain is Windows Server 2012.

The network uses an address space of 192.168.0.0/16 and contains multiple subnets.

The network is not connected to the Internet.

The domain contains three servers configured as shown in the following table.

Server name	Configuration
Server1	Domain controller and DNS server
Server2	Member server
Server3	DHCP server

Client computers obtain TCP/IP setting from Server3.

You add a second network adapter to Server2. You connect the new network adapter to the Internet. You install the Routing role service on Server2.

Server1 has four DNS zones configured as shown in the following table.

DNS zone name	Type	Zone file name
Contoso.com	Active Directory-integrated	None
Fabrikam.com	Primary	Fabrikam.com.dns
Tailspintoys.com	Primary	Tailspintoys.com.dns
168.192.in-addr.arpa	Primary	168.192.in-addr.arpa.dns

**End of repeated scenario**

You need to configure an administrator named admin@fabrikam.com as the contact person for the fabrikam.com zone. What should you modify? To answer, select the appropriate options in the answer area.

Hot Area:

Record type to modify:

Host information (HINFO)
Mailbox information (MINFO)
Start of authority (SOA)
Text (TXT)

Record value to modify:

Error Mailbox
Responsible Mailbox
Responsible Person
Text

Correct Answer:

Record type to modify:

Host information (HINFO)
Mailbox information (MINFO)
Start of authority (SOA)
Text (TXT)

Record value to modify:

Error Mailbox
Responsible Mailbox
Responsible Person
Text
