QUESTION 1

DRAG DROP

You are the network administrator for a company named Contoso, Ltd.

Contoso has a partner company named Fabrikam, Inc.

The networks of both companies contain Active Directory forests. The functional level of both forests is Windows 2008. Both forests has Active Directory Rights Management Services (AD RMS) and Microsoft Exchange Server 2016 installed.

The users in both forests can access AD RMS and Exchange servers.

You need to ensure that the Contoso users can access rights-protected content of the Fabrikam users. The solution must minimize changes to the AD RMS clients and must eliminate the need to exchange AD RMS private keys.

Select and Place:

Actions	Answer Area
Import the trusted publishing domain file to Contoso.	
Export the trusted publishing domain file from Fabrikam.	
Extend the Active Directory schema of Contoso.	
Enable anonymous access on the AD RMS licensing pipeline.	
Export the trusted user domain file from Fabrikam.	
Import the trusted user domain file to Contoso.	

Correct Answer:

Actions	Answer Area
Import the trusted publishing domain file to Contoso.	Export the trusted user domain file from Fabrikam.
Export the trusted publishing domain file from Fabrikam.	Import the trusted user domain file to Contoso.
	Enable anonymous access on the AD RMS licensing pipeline.
	Extend the Active Directory schema of Contoso.

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com.

The domain contains a server named Server1 that runs Windows Server 2016.

The Computer account for Server1 is in organizational unit (OU) named OU1.

You create a Group Policy object (GPO) named GPO1 and link GPO1 to OU1.

You need to add a domain user named user1 to the local Administrators group on Server1.

Solution: From the Computer Configuration node of GPO1, you configure the Restricted Groups settings.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

QUESTION 3

Your network contains an Active Directory domain. The domain contains a domain controller named DC1 that runs Windows Server 2016.

You start DC1 in Directory Services Restore Mode (DSRM).

You need to compact the Active Directory database on DC1.

Which three action should you perform in sequence?

Select and Place:

Actions	Answer Area
Run ntdsutil.exe.	1.
From the Metadata Cleanup context, select an operation target.	2.
Run dsamain.exe.	3.
From the Semantic Database Analysis context, run go fixup.	
Run activate instance ntds.	
From the Files context, run compact.	

Correct Answer:

Actions

From the Metadata Cleanup context, select an operation target.
Run dsamain.exe.
From the Semantic Database Analysis context, run go fixup.

Answer Area

1. Run ntdsutil.exe.

2. Run activate instance ntds.

3. From the Files context, run compact.

QUESTION 4

Note: This question is part of a series of questions that use the same scenario. For you convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is

exactly the same in each question in this series.

Start of repeated scenario.

You work for a company named Contoso, Ltd.

The network contains an Active Directory forest named contoso.com. A forest trust exists between contoso.com and an Active Directory forest named adatum.com.

Object name	Object type	Group scope	Group type
User1	User	*Not applicable*	*Not applicable*
User2	User	*Not applicable*	*Not applicable*
Computer1	Computer	*Not applicable*	*Not applicable*
Group1	Group	Domain local	Security
Group2	Group	Domain local	Security
Group3	Group	Universal	Security
Group4	Group	Global	Security
Group5	Group	Universal	Security

The contoso.com forest contains the objects configured as shown in the following table.

Group1 and Group2 contain only user accounts.

Contoso hires a new remote user named User3. User3 will work from home and will use a computer named Computer3 that runs Windows 10. Computer3 is currently in a workgroup.

An administrator named Admin1 is a member of the Domain Admins group in the contoso.com domain.

From Active Directory Users and Computers, you create an organizational unit (OU) named OU1 in the contoso.com domain, and then you create a contact named Contact1 in OU1.

An administrator of the adatum.com domain runs the Set-ADUser cmdlet to configure a user named User1 to have a user logon name of User1@litwareinc.com.

End or repeated scenario.

You need to join Computer3 to the contoso.com domain by using offline domain join.

Which command should you use in the contoso.com domain and on Computer3? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

The contoso.com domain: ▼

Add-Computer with the-DomainName parameter
Djoin.exe with the /provision parameter
Djoin.exe with the /requestodj parameter
Net computer with the /add parameter
Netdom.exe with the join parameter

Computer3: ▼

Add-Computer with the-DomainName parameter
Djoin.exe with the /provision parameter
Djoin.exe with the /requestodj parameter
Net computer with the /add parameter
Netdom.exe with the join parameter

Correct Answer:

Answer Area

The contoso.com domain: ▼

Add-Computer with the-DomainName parameter
Djoin.exe with the /provision parameter
Djoin.exe with the /requestodj parameter
Net computer with the /add parameter
Netdom.exe with the join parameter

Computer3: ▼

Add-Computer with the-DomainName parameter
Djoin.exe with the /provision parameter
Djoin.exe with the /requestodj parameter
Net computer with the /add parameter
Netdom.exe with the join parameter

QUESTION 5

Your network contains an Active Directory domain named contoso.com.

The domain contains an enterprise root certification authority (CA) on a server that runs Windows Server 2016.

You need to configure the CA to support Online Certificate Status Protocol (OCSP) responders.

Which two actions should you perform? Each correct selection presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Add a new certificate template to issue.

B. Modify the Authority Information Access (AIA) of the CA.

C. Configure an enrollment agent.

D. Install a standalone subordinate CA.

E. Modify the CRL distribution point (CDP) of the CA.

Correct Answer: AB

Once the OCSP service is configured, we need to configure the OCSP Response Signing template. This process includes adding an Authority Information Access (AIA) extension and then issuing a new certificate template.
