QUESTION 1

You have a server named Server1 that runs Windows Server 2016.

You need to install the DNS Server role on Server1.

What should you run?

- A. the dnscmd.exe command
- B. the dns.exe command
- C. the Install-Package cmdlet
- D. the Enable-WindowsOptionalFeature cmdlet
- E. the setup.exe command
- F. the Add-WindowsPackage cmdlet

Correct Answer: D

Enable-WindowsOptionalFeature -Online -FeatureName DNS-Server-Full-Role

References: <https://docs.microsoft.com/en-us/powershell/module/dism/enable-windowsoptionalfeature?view=win10-ps>
<https://blogs.technet.microsoft.com/teamdhcp/2015/12/04/how-to-deploy-windows-dns-server-on-nano-server/>

QUESTION 2

You have a server named Server1 that runs Windows Server 2016 and has a Hyper-V server role installed. You open Disk Management on Server1 as shown in the following graphic.

You plan to configure Disk 13 as a pass-through disk for a generation 1 virtual machine.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

Hot Area:

Answer Area

The status of Disk 13 must be set to **[answer choice]**

	▼
Initializing	
Offline	
Online	

If the virtual machine uses Disk 13 as the system partition, Disk 13 must be attached to **[answer choice]** in Hyper V Manager.

	▼
a Fibre Channel adapter	
an IDE controller	
a SCSI controller	

Correct Answer:

Answer Area

The status of Disk 13 must be set to **[answer choice]**

	▼
Initializing	
Offline	
Online	

If the virtual machine uses Disk 13 as the system partition, Disk 13 must be attached to **[answer choice]** in Hyper V Manager.

	▼
a Fibre Channel adapter	
an IDE controller	
a SCSI controller	

If the disk is not in an Offline state, it will not be available for selection when configuring the Guest's storage. If the Pass-through disk will be used to boot the operating system, it must be attached to an IDE Controller. References: <https://blogs.technet.microsoft.com/askcore/2008/10/24/configuring-pass-through-disks-in-hyper-v/>

QUESTION 3

Your network contains an Active Directory domain. The domain contains two Hyper-V hosts.

You plan to perform live migrations between the hosts.

You need to ensure that the live migration traffic is authenticated by using Kerberos.

What should you do first?

- A. From Server Manager, install the Host Guardian Service server role on a domain controller.
- B. From Active Directory Users and Computers, add the computer accounts for both servers to the Cryptographic Operators group.
- C. From Active Directory Users and Computers, modify the Delegation properties of the computer accounts for both servers.
- D. From Server Manager, install the Host Guardian Service server role on both servers.

Correct Answer: C

If you have decided to use Kerberos to authenticate live migration traffic, configure constrained delegation before you proceed to the rest of the steps.

To configure constrained delegation

Open the Active Directory Users and Computers snap-in.

From the navigation pane, select the domain and double-click the Computers folder.

From the Computers folder, right-click the computer account of the source server and then click Properties.

In the Properties dialog box, click the Delegation tab.

On the delegation tab, select Trust this computer for delegation to the specified services only. Under that option, select Use Kerberos only.

QUESTION 4

You have a Hyper-V host named Server1 that runs Windows Server 2016.

Server1 has a virtual machine named VM1. VM1 is configured to run the Docker daemon.

On VM1, you have a container network that uses transparent mode.

You need to ensure that containers that run on VM1 can obtain IP addresses from DHCP.

What should you do?

- A. On VM1, run docker network connect.
- B. On Server1, run docker network connect.
- C. On VM1, run Get-VMNetworkAdapter ?MName VM1 | Set-VMNetworkAdapter ?acAddressSpoofing On.
- D. On Server1, run Get-VMNetworkAdapter ?MName VM1 | Set-VMNetworkAdapter ?MacAddressSpoofing On.

Correct Answer: D

If the container host is virtualized, and you wish to use DHCP for IP assignment, you must enable MACAddressSpoofing.

```
PS C:\> Get-VMNetworkAdapter -VMName ContainerHostVM | Set-VMNetworkAdapter -MacAddressSpoofing On
```

The command needs to be run on the Hyper-V host.

QUESTION 5

You have a DNS server named Server1.

The forwarders are configured as shown in the Forwarders exhibit. (Click the Exhibit button.)

SERVER1 Properties

Debug Logging | Event Logging | Monitoring | Security
Interfaces | **Forwarders** | Advanced | Root Hints

Forwarders are not available because this server does not use recursion.

IP Address	Server FQDN
168.63.129.16	<Unable to resolve>

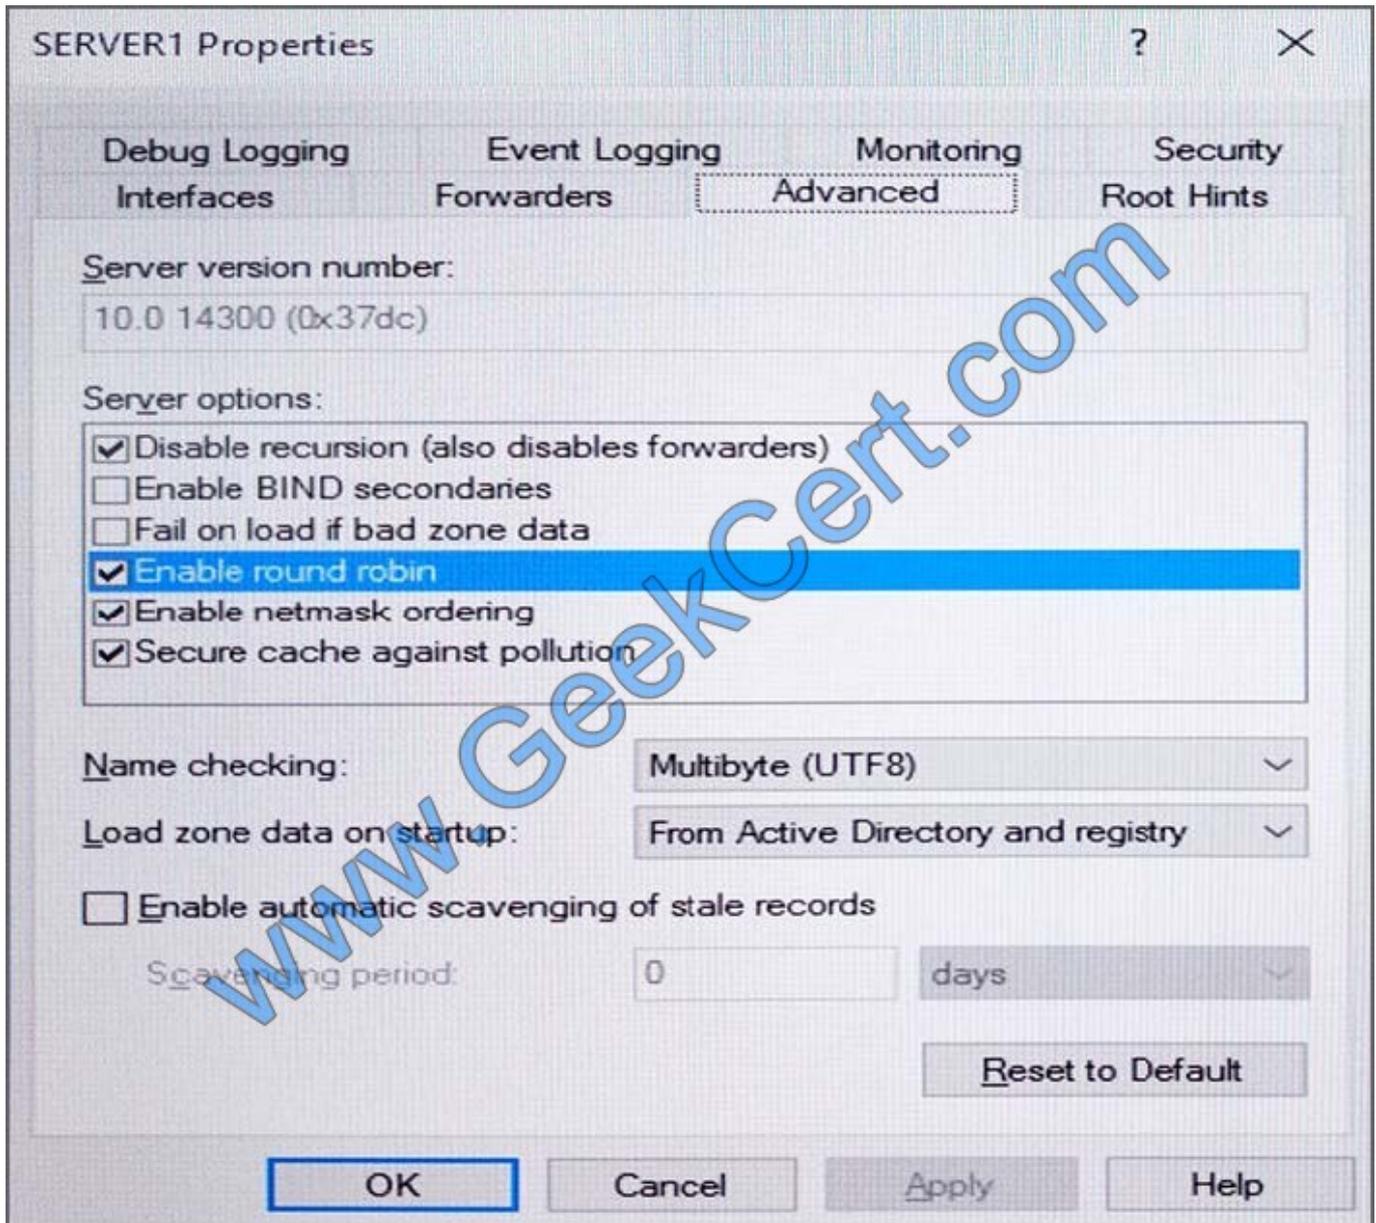

Use root hints if no forwarders are available Edit...

Note: If conditional forwarders are defined for a given domain, they will be used instead of server-level forwarders. To create or view conditional forwarders, navigate to the Conditional Forwarders node in the scope tree.

OK | Cancel | Apply | Help

The Advanced Settings are configured as shown in the Advanced exhibit. (Click the Exhibit button.)

The Root Hints are configured as shown in the Root Hints exhibit. (Click the Exhibit button.)

SERVER1 Properties

Debug Logging Event Logging Monitoring Security
Interfaces Forwarders Advanced **Root Hints**

Root hints resolve queries for zones that do not exist on the local DNS server. They are only used if forwarders are not configured or fail to respond.

Name servers:

Server Fully Qualified Domain Name (FQDN)	IP Address
a.root-servers.net.	[2001:503:ba3e::2...
b.root-servers.net.	[2001:500:84:b]
f.root-servers.net.	[2001:500:2:f]
i.root-servers.net.	[2001:7e::53]
l.root-servers.net.	[2001:500:9f::42]
m.root-servers.net.	[2001:dc3::35]

Add... Edit... Remove Copy from Server

OK Cancel Apply Help

Server1 does not contain any DNS zones.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Hot Area:

Answer Area

Statements	Yes	No
Server1 can resolve the names of hosts that are located on the Internet.	<input type="radio"/>	<input type="radio"/>
From Server1 Properties, if you perform a test from the Monitoring tab, the recursive test will pass.	<input type="radio"/>	<input type="radio"/>
Server1 is configured as a root DNS server.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

Statements	Yes	No
Server1 can resolve the names of hosts that are located on the Internet.	<input type="radio"/>	<input checked="" type="radio"/>
From Server1 Properties, if you perform a test from the Monitoring tab, the recursive test will pass.	<input type="radio"/>	<input checked="" type="radio"/>
Server1 is configured as a root DNS server.	<input type="radio"/>	<input checked="" type="radio"/>

Recursion is disabled so internet hosts cannot be resolved.

The recursive test fails because recursion is disabled.

Server1 is not configured as a root server. The forwarders list would be greyed out if it was.
