QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to run a Transact-SQL script against a Microsoft Azure SQL database daily at 01:00.

Solution: You install the Elastic Database jobs PowerShell package, and then you create an Elastic Database job.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 2

You have an on-premises server that runs Windows Server 2012 R2. The server has a Microsoft SQL Server 2016 instance that has one user database. The database is 2 TB.

Your company has a Win32 application installed on 1,000 computers. The application connects to the database by using a network name of server1.contoso.local.

You need to migrate the database to SQL Server 2016 on a Microsoft Azure virtual machine that runs Windows Server 2016. The solution must minimize outages to the application.

What should you do?

A. Copy the database files and update the records in DNS.

B. Implement an availability group and update the records in DNS.

C. Implement database mirroring and update the records in DNS.

D. Implement database mirroring and change the connection string.

Correct Answer: B

SQL Server high availability and disaster recovery (HADR) technologies that are supported in Azure include:

QUESTION 3

You need to create the contosodb1 database.

How should you complete the Azure PowerShell command? To answer, select the appropriate Azure PowerShell segments in the answer area.
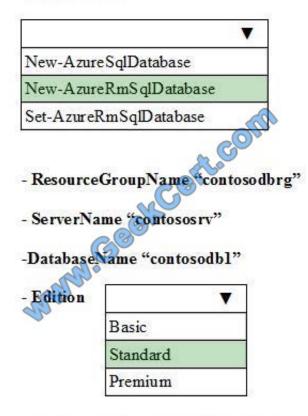

Hot Area:

Answer Area

▼
New-AzureSqlDatabase
New-AzureRmSqlDatabase
Set-AzureRmSqlDatabase

- ResourceGroupName "contosodbrg"

- ServerName "contososrv"

-DatabaseName "contosodb1"

- Edition

▼
Basic
Standard
Premium

-RequestedServiceObjectName S2

Correct Answer:

Answer Area

New-AzureSqlDatabase
New-AzureRmSqlDatabase
Set-AzureRmSqlDatabase

- ResourceGroupName "contosodbrg"

- ServerName "contososrv"

-DatabaseName "contosodb1"

- Edition

▼
Basic
Standard
Premium

-RequestedServiceObjectName S2

QUESTION 4

You have a database named DB1 that uses simple recovery mode. Full backups of DB1 are taken daily and DB1 is checked for corruption before each backup.

There was no corruption when the last backup was complete.

You run the sys.columns catalog view and discover corrupt pages.

You need to recover the database. The solution must minimize data loss.

What should you do?

A. Run RESTORE DATABASE WITH RECOVERY.

B. Run RESTORE DATABASE WITH PAGE.

C. Run DBCC CHECKDB and specify the REPAIR_ALLOW_DATA_LOSS parameter.

D. Run DBCC CHECKDB and specify the REPAIT_REBUILD parameter.

Correct Answer: B

A page restore is intended for repairing isolated damaged pages. Restoring and recovering a few individual pages might be faster than a file restore, reducing the amount of data that is offline during a restore operation.

RESTORE DATABASE WITH PAGE

Restores individual pages. Page restore is available only under the full and bulk-logged recovery models.

---

QUESTION 5

You plan to deploy Microsoft SQL Server on a Microsoft Azure Virtual machine. The virtual machine will have a 30-TB database and will have 10 1-TB VHDs for the database.

You need to configure the storage to meet the following requirements: Evenly distribute read and write operations across the VHDs. Minimize the read and write time.

Which storage configuration should you use?

A. a parity storage pool

B. a simple storage pool

C. a mirrored storage pool

D. a striped volume

E. a RAID-5 volume

Correct Answer: D

Data that is written to a striped volume is interleaved to all disks at the same time instead of sequentially. Therefore, disk performance is the fastest on a RAID 0 volume as compared to any other type of disk configuration. Reference:

https://support.microsoft.com/en-us/help/323433/how-to-establish-a-striped-volume-raid-0-inwindows-server-2003
