QUESTION 1

You need to open the firewall ports for use with SQL Server environment. In table below, identify the firewall port that you must use for each service. NOTE: Make only one selection in each column.

Hot Area:

Answer Area

Port number	Report Server	SQL Server Browser service for SSAS
80	<input type="radio"/>	<input type="radio"/>
135	<input type="radio"/>	<input type="radio"/>
1433	<input type="radio"/>	<input type="radio"/>
2382	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

Port number	Report Server	SQL Server Browser service for SSAS
80	<input checked="" type="radio"/>	<input type="radio"/>
135	<input type="radio"/>	<input type="radio"/>
1433	<input type="radio"/>	<input checked="" type="radio"/>
2382	<input type="radio"/>	<input type="radio"/>

Report Server: 80

By default, the report server listens for HTTP requests on port 80.

QUESTION 2

You plan to migrate a Microsoft SQL server instance between physical servers.

You must migrate the metadata associated with the database instance.

You need to ensure that the new instance retains the existing jobs and alerts.

Solutions: You restore the msdb database.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

The msdb database is used by SQL Server Agent for scheduling alerts and jobs and by other features such as SQL Server Management Studio, Service Broker and Database Mail.

References: <https://docs.microsoft.com/en-us/sql/relational-databases/databases/msdb-database?view=sql-server-2017>

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets stated goals.

You manage a Microsoft SQL Server environment with several databases.

You need to ensure that queries use statistical data and do not initialize values for local variables.

Solution: You enable the QUERY_OPTIMIZER_HOTFIXES option for the databases.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

QUERY_OPTIMIZER_HOTFIXES = { ON | OFF | PRIMARY } enables or disables query optimization hotfixes regardless of the compatibility level of the database. This is equivalent to Trace Flag 4199.

References: <https://msdn.microsoft.com/en-us/library/mt629158.aspx>

QUESTION 4

You have an on-premises SQL Server database named DB1 that contains a table named TB1. TB1 is stretched to Microsoft Azure.

A catastrophic hardware failure occurs on the on-premises SQL server.

You deploy a new on-premises server and restore all databases to the new server.

You need to resume Stretch Database operations to Azure.

Which statements should you execute?

- A.

```
ALTER TABLE tbl1
    SET ( REMOTE_DATA_ARCHIVE ( MIGRATION_STATE = PAUSE ) ) ;
GO
sp_rda_get_rpo_duration
```
- B.

```
EXEC sp_rda_reauthorize_db @credential = <credential>;
GO
ALTER TABLE tbl1
    SET ( REMOTE_DATA_ARCHIVE = ON (
        FILTER_PREDICATE = dbo.fn_stretchpredicae(),
        MIGRATION_STATE = OUTBOUND) );
```
- C.

```
sp_rda_deauthorize_db
GO
ALTER TABLE tbl1
    SET ( REMOTE_DATA_ARCHIVE ( MIGRATION_STATE = PAUSE ) ) ;
    FILTER_PREDICATE = db
GO
EXEC sp_rda_reauthorize_db @credential = <credential>;
GO
```
- D.

```
GO
EXEC sp_rda_reauthorize_db @credential = <credential>;
GO
CREATE TABLE tbl1
    ...
    WITH ( REMOTE_DATA_ARCHIVE = ON ( MIGRATION_STATE = OUTBOUND) );
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: B

Use ALTER TABLE, not CREATE TABLE.

When you enable Stretch for a table by specifying ON, you also have to specify `MIGRATION_STATE = OUTBOUND` to begin migrating data immediately, or `MIGRATION_STATE = PAUSED` to postpone data migration.

Syntax:

::=

{

```
SET (  
REMOTE_DATA_ARCHIVE  
{  
= ON (  
|= OFF_WITHOUT_DATA_RECOVERY ( MIGRATION_STATE = PAUSED )  
| ( [, ...n] )  
}  
)  
}
```

QUESTION 5

You are migrating an on-premises Microsoft SQL Server instance to SQL Server on a Microsoft Azure virtual machine. The instance has 30 databases that consume a total of 2 TB of disk space. The instance sustains more than 30,000 transactions per second.

You need to provision storage for the virtual machine. The storage must be able to support the same load as the on-premises deployment.

Solution: You use drive D on the virtual machine to store the database files.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

The D drive should only be used for temporary data.
