### QUESTION 1

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You have a data source that is larger than memory.

You need to visualize the distribution of the values for a variable in the data source.

What should you use?

- A. the Describe package
- B. the rxHistogram function
- C. the rxSummary function
- D. the rxQuantile function
- E. the rxCube function
- F. the summary function
- G. the rxCrossTabs function
- H. the ggplot2 package

Correct Answer: B

---

### QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You use `dplyrXdf`, and you discover that after you exit the session, the output files that were created were deleted.

You need to prevent the files from being deleted.

Solution: You use `dplyrXdf` with the `outFile` parameter and specify a path other than the working directory for `dplyrXdf`.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

### QUESTION 3

You have a Microsoft SQL Server instance that has R Services (In-Database) installed. The server has a comma-separated values (CSV) file stored in the local file system.

For analytic purposes, you need to read the CSV file into a database table in the SQL Server instance.

You connect to the SQL Server instance by using SQL Server Management Studio.

What should you use from `sp_execute_external_script`?

- A. `RxSqlServerData` and specify the CSV file path in the connection string
- B. `rxDataStep` and specify the CSV file path as the `inFile` argument
- C. `rxImportToXdf` and specify the CSV file as the input
- D. `read.csv` and specify the CSV file path as the parameter

Correct Answer: D

### QUESTION 4

You have the following regression forest.

```
rxDForest(formula = stack.loss ~ Air.Flow + Water.Temp +  
Acid.Conc., data = stackloss, maxDepth = 3, nTree = 200, mTry =  
2)
```

Type of decision forest: anova

Number of trees: 200

No. of variables tried at each split: 2

Mean of squared residuals: 44.54992 % Var explained: 65

Which variable contributes the most to the dependent variable?

- A. `stack.loss`
- B. `Water.Temp`
- C. `Air.Flow`
- D. `Acid.Conc`

Correct Answer: D

## QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You use `dplyrXdf`, and you discover that after you exit the session, the output files that were created were deleted.

You need to prevent the files from being deleted.

Solution: You use `rxSetComputeContext` with the local parameter before performing operations that save results.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B
