QUESTION 1

You have cloud and on-premises resources that include Microsoft SQL Server and a big data environment in Apache Hadoop.

You have 50 billion fact records.

You need to build time series models to execute forecasting reports on the fact records.

What should you use?

A. RxSpark on the Hadoop cluster

B. RxHadoopMR on the Hadoop cluster

C. RxLocalseq on the SQL Server database

D. RxLocalParallel on the SQL Server database

Correct Answer: A

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft SQL Server instance that has R Services (In-Database) installed.

You need to monitor the R jobs that are sent to SQL Server.

Solution: You create an events trace configuration file and place the file in the same directory as the BXLServer process.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 3

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You need to calculate a measure of central tendency and variability for the variables in a dataset that is grouped by using another categorical variable.

What should you use?

A. the Describe package

B. the rxHistogram function

C. the rxSummary function

D. the rxQuantile function

E. the rxCube function

F. the summary function

G. the rxCrossTabs function

H. the ggplot2 package

Correct Answer: C

QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You use dplyrXdf, and you discover that after you exit the session, the output files that were created were deleted.

You need to prevent the files from being deleted.

Solution: You use rxSetComputeContext with the local parameter before performing operations that save results.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 5

You are running a parallel function that uses the following R code segment. (Line numbers are included for reference

only.)

01 cp
