QUESTION 1

You are building a Microsoft Azure Stream Analytics job definition that includes inputs, queries, and outputs. You need to create a job that automatically provides the highest level of parallelism to the compute instances. What should you do?

- A. Configure event hubs and blobs to use the PartitionKey field as the partition ID.
- B. Set the partition key for the inputs, queries, and outputs to use the same partition folders. Configure the queries to use uniform partition keys.
- C. Set the partition key for the inputs, queries, and outputs to use the same partition folders. Configure the queries to use different partition keys.
- D. Define the number of input partitions to equal the number of output partitions.

Correct Answer: A

QUESTION 2

You ingest data into a Microsoft Azure event hub.

You need to export the data from the event hub to Azure Storage and to prepare the data for batch processing tasks in Azure Data Lake Analytics.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Run the Avro extractor from a U-SQL script.
- B. Create an Azure Storage account.
- C. Add a shared access policy.
- D. Enable Event Hubs Archive.
- E. Run the CSV extractor from a U-SQL script.

Correct Answer: BD

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are monitoring user queries to a Microsoft Azure SQL data warehouse that has six compute nodes.

You discover that compute node utilization is uneven. The `rows_processed` column from `sys.dm_pdw_workers` shows a significant variation in the number of rows being moved among the distributions for the same table for the same query.

You need to ensure that the load is distributed evenly across the compute nodes.

Solution: You add a clustered columnstore index.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are troubleshooting a slice in Microsoft Azure Data Factory for a dataset that has been in a waiting state for the last three days. The dataset should have been ready two days ago.

The dataset is being produced outside the scope of Azure Data Factory. The dataset is defined by using the following JSON code.

```
{
  "name": "CustomerTable",
  "properties": {
    "type": "AzureBlob",
    "linkedServiceName": "MyLinkedService",
    "typeProperties": {
      "folderPath": "MyContainer/MySubFolder/",
      "format": {
        "type": "TextFormat",
        "columnDelimiter": ",",
        "rowDelimiter": ";"
      }
    },
    "external": false,
    "availability": {
      "frequency": "Hour",
      "interval": 1
    },
    "policy": {
    }
  }
}
```

You need to modify the JSON code to ensure that the dataset is marked as ready whenever there is data in the data store.

Solution: You add a structure property to the dataset.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 5

DRAG DROP

You are troubleshooting job performance and failure issues for Microsoft Azure Data Lake Analytics jobs.

You need to perform the following tasks:

Which tool should you use for each task? To answer, drag the appropriate tools to the correct tasks. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Tools	Answer Area
<div>Diagnostic logs</div>	View the start time and the end time of queries: <div>Tool</div>
<div>Job Browser</div>	Identify the job steps that have the highest number of write operations: <div>Tool</div>
<div>Vertex Execution View</div>	

Correct Answer:

Tools	Answer Area
<div>Diagnostic logs</div>	View the start time and the end time of queries: <div>Job Browser</div>
<div>Job Browser</div>	Identify the job steps that have the highest number of write operations: <div>Job Browser</div>
<div>Vertex Execution View</div>
