QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

You have the following data.

OrderDate	OrderNumber	ProductName	OrderQuantity
1/28/2018	998989	Product0	10
1/28/2018	998990	Product1	22
1/28/2018	998991	Product2	21
1/29/2018	998992	Product3	43
1/29/2018	998993	Product2	56
1/29/2018	998994	Product3	12

You need to retrieve a list of the unique ProductName entries.

Solution: Create a PivotTable that uses the ProductName field in the Values area.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 2

You have a workbook query that loads data from C:\Data\Users.xlsx.

You move Users.xlsx to a shared folder on the network.

You need to ensure that you can refresh the data from Users.xlsx.

What should you do?

- A. From the Linked Table tab in Power Pivot, modify the Update Mode.
- B. From Query Editor, modify the Source step.

- C. From the Insert tab in Excel, click My Add-ins, and then manage the add-ins.
- D. From the Data tab in Excel click Connections, and then modify the properties of the connection.

Correct Answer: A

QUESTION 3

You have a table named Sales that has three columns named OrderDate, OrderNumber, and SalesAmount. You need to create the PivotTable as shown in the following table.

OrderDate (Month)	Sum of SalesAmount
Dec	\$33,077.00
Nov	\$30,180.00
Oct	\$29,295.00
Sep	\$26,520.00
Aug	\$25,513.00
Jul	\$23,591.00
Jun	\$21,000.00
May	\$19,809.00
Apr	\$17,340.00
Mar	\$16,027.00
Feb	\$12,856.00
Jan	\$35,495.00

What should you use?

- A. KPIs
- B. sparklines
- C. conditional formatting
- D. banded rows

Correct Answer: A

QUESTION 4

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is the

same in each question in this series.

Start of repeated scenario

You are creating reports for a car repair company. You have four datasets in Excel spreadsheets. Your workbook

queries load the datasets to a data model. A sample of the data is shown in the Data Sample exhibit.

Data Sample:

The screenshot displays four data tables from a model:

- DailyRepairs**: A table with columns Date, WorkshopID, RepairTypeID, Hours, and Revenue. It shows repair records for October 2016.
- Workshops**: A table with columns ID, Workshop Name, and Workshop Manager. It lists six workshops: Cambridge, Bedford, Camden, Belsize, Kearing, and Kilburn.
- Dates**: A table with columns ID, Date, Month, and MonthID. It shows a sequence of dates from 2016-01-01 to 2016-01-09.
- RepairTypes**: A table with columns ID and Repair Type. It lists nine types: Engine, Radiator, Gearbox, Clutch, Brakes, Tires, Bodywork, Windscreen, and Other.

The data model is shown in the Data Model exhibit. Data Model

The tables in the model contain the following data:

DailyRepairs has a log of hours and revenue for each day, workshop, and repair type. Every day, a log entry is created for each workshop, even if no hours or revenue are recorded for that day. Total Hours and Total Revenue are two

measures defined in DailyRepairs. Total Hours sums the Hours column, and Total Revenue sums the Revenue column.

Workshops has a list of all the workshops and the current and previous workshop managers. The format of the Workshop Manager column is always FirstnameLastname. A value of 1 in the IsLatest column indicates that the workshop

manager listed in the record is the current workshop manager.

RepairTypes has a list of all the repair types.

Dates has a list of dates from 2015 to 2018.

End of repeated scenario.

To the Dates table, you need to add a calculated column named Months Ago. Months Ago must display the number of calendar months before the current month. For example, if the current date is July 10, 2017, the value of Months Ago will

be 0 for all the dates in July 2017, 1 for all the dates in June 2017, and 2 for all the dates in May 2017.

How should you complete the DAX formula? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Correct Answer:

QUESTION 5

You have a table named Date that contains the following data.

DateKey (Whole Number)	FullAlternateDateKey (Date)	MonthName (Text)
20050101	1/1/05	January
20050102	1/2/05	January
20050103	1/3/05	January
20050104	1/4/05	January

SalesOrderID (Whole Number)	OrderDate (Date)	PurchaseOrderNumber (Text)	AccountNumber (Text)
43659	5/31/11 12:00 AM	PO522145787	10-4020-000676
43660	5/31/11 12:00 AM	PO18850127500	10-4020-000117
43661	5/31/11 12:00 AM	PO18473189620	10-4020-000442
43662	5/31/11 12:00 AM	PO18444174044	10-4020-000227

You plan to create Pivot Charts that will be sliced by MonthName.

You need to create a relationship between Sales and Date.

Which Columns should you use to create the relationship? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
