QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains a HyperV host named Server1. Server1 has an offline virtual machine named VMI that is stored on a virtual hard disk named VMI.vhd. You plan to

implement multiple virtual machines that have the same configurations as VMI. You need to recommend a virtual hard disk solution for the planned implementation.

The solution must meet the following requirements:

Minimize the amount of time required to create the new virtual machines.

Minimize the amount of storage space required on Server1.

What should you include in the recommendation?

- A. Differencing VHD disks
- B. Dynamically expanding VHD disks
- C. Dynamically expanding VHDX disks
- D. Differencing VHDX disks

Correct Answer: A

QUESTION 2

You need to design a solution for the recovery-time objective.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Schedule a task to create a snapshot of the NTDS database before the existing backup job runs.
- B. Enable the KDC support for claims, compound authentication, and Kerberos armoring administrative template policy.
- C. Set the functional level for each domain to Windows Server 2012.
- D. Set the functional level of the forest to Windows Server 2008 R2.
- E. Enable the Active Directory Recycle Bin.

Correct Answer: AE

QUESTION 3

You plan to deploy multiple servers in a test environment by using Windows Deployment Services (WDS). You need to identify which network services must be available in the test environment to deploy the servers. Which network services should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Acti Directory Domain Services (AD DS)
- B. DNS
- C. DHCP
- D. WINS
- E. Active Directory Lightweight Directory Services (AD LDS)
- F. Network Policy Server (NPS)

Correct Answer: BC

QUESTION 4

You need to configure DNS for the Dublin office.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

On DC1, configure a replication scope for lab.contoso.com.

On DC2, change the DNS Zone type for lab.contoso.com to **Stub Zone**.

On DC3, unregister the DomainDnsZones application partition.

On DC1, change the DNS Zone type for lab.contoso.com to **Secondary Zone**.

Install a new domain controller named **DC3**.

On DC1, create a new DNS application partition.

Answer Area

www.GeekCert.com

Correct Answer:

Actions

- On DC3, unregister the DomainDnsZones application partition.
- On DC1, change the DNS Zone type for lab.contoso.com to **Secondary Zone**.
- Install a new domain controller named **DC3**.

Answer Area

- On DC1, create a new DNS application partition.
- On DC1, configure a replication scope for lab.contoso.com.
- On DC2, change the DNS Zone type for lab.contoso.com to **Stub Zone**.

QUESTION 5

Your network contains an Active Directory forest named corp.contoso.com. All servers run Windows Server 2012.

The network has a perimeter network that contains servers that are accessed from the Internet by using the contoso.com namespace.

The network contains four DNS servers. The servers are configured as shown in the following table.

Server name	Location	Function	DNS zone	Zone type
DC1	Internal network	Domain controller, DNS server	Corp.contoso.com	Active Directory- integrated
DC2	Internal network	Domain controller, DNS server	Corp.contoso.com	Active Directory- integrated
Server1	Perimeter network	DNS server	Contoso.com	Primary
Server2	Perimeter network	DNS server	Contoso.com	Secondary

All of the client computers on the perimeter network use Server1 and Server2 for name resolution. You plan to add DNS servers to the corp.contoso.com domain.

You need to ensure that the client computers automatically use the additional name servers. The solution must ensure that only computers on the perimeter network can resolve names in the corp.contoso.com domain.

Which DNS configuration should you implement on Server1 and Server2?

To answer, drag the appropriate DNS configuration to the correct location in the answer area. Each DNS configuration may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll

to view content.

Select and Place:

The screenshot shows a drag-and-drop interface. On the left, under the heading "Configurations", there are four yellow buttons: "a conditional forwarder", "a zone delegation", "a stub zone", and "a subdomain". On the right, under the heading "Answer Area", there are two rows. The first row is for "Server1" and the second row is for "Server2". Each row has a light blue box labeled "Configuration". A diagonal watermark "www.GeekCert.com" is visible across the interface.

Correct Answer:

The screenshot shows the correct answer. The "Configurations" pane on the left remains the same. In the "Answer Area", the "Server1" and "Server2" rows now each contain a yellow button labeled "a stub zone". A diagonal watermark "www.GeekCert.com" is visible across the interface.
