### QUESTION 1

You have a properly configured certification authority in an Active Directory Domain Services domain. You must implement twofactor authentication and use virtual smart cards to secure user sessions. You need to implement twofactor

authentication for each client device.

What should you install on each client device?

- A. a smart card reader
- B. a user certificate issued by a certification authority
- C. a Trusted Platform Module (TPM) chip
- D. a local computer certificate issued by a certificate authority

Correct Answer: B

---

### QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains four servers named Server1, Server2, Server3 and Server4 that run Windows Server 2012.

Server1 and Server2 are configured as file servers and are part of a failover cluster named Cluster1. Server3 and

Server4 have Microsoft SQL Server 2012 installed and are part of a failover cluster named Cluster2.

You add a disk named Disk1 to the nodes in Cluster1. Disk1 will be used to store the data files and log files used by SQL Server 2012.

You need to configure the environment so that access to Disk1 remains available when a node on Cluster1 fails over or fails back.

Which three actions should you perform?

To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

From Failover Cluster Manager, configure the clustered File Server role of the File Server for scale-out application data type on Cluster2.

From Failover Cluster Manager, add Disk1 to Cluster Shared Volumes (CSVs).

From Cluster-Aware Updating, add Server1 and Server2.

From Failover Cluster Manager, configure the clustered File Server role of the File Server for scale-out application data type on Cluster1.

From Failover Cluster Manager, add Disk1 to Cluster1.

From Failover Cluster Manager, add Disk1 to Cluster2.

Answer Area

Correct Answer:

Actions

From Failover Cluster Manager, configure the clustered File Server role of the File Server for scale-out application data type on Cluster2.

From Cluster-Aware Updating, add Server1 and Server2.

From Failover Cluster Manager, add Disk1 to Cluster2.

Answer Area

From Failover Cluster Manager, add Disk1 to Cluster1.

From Failover Cluster Manager, add Disk1 to Cluster Shared Volumes (CSVs).

From Failover Cluster Manager, configure the clustered File Server role of the File Server for scale-out application data type on Cluster1.

### QUESTION 3

Your network contains an Active Directory forest named contoso.com. The forest is managed by using Microsoft System Center 2012.

You plan to create virtual machine templates to deploy servers by using the Virtual Machine Manager Self-service Portal (VMMSSP).

To the Virtual Machine Manager (VMM) library, you add a VHD that has a generalized image of Windows Server 2012. You need to identify which VMM components must be associated with the image. Which components should you identify?

(Each correct answer presents part of the solution.)

Choose all that apply.)

- A. A guest OS profile
- B. A hardware profile
- C. A capability profile
- D. A host profile

Correct Answer: AB

---

### QUESTION 4

You have a server named DNS1 that runs Windows Server 2012. DNS1 has the DNS server role installed. You need to recommend changes to the DNS I to prevent several names from being registered in DNS. What should you configure on DNS1?

- A. DNS devolution
- B. DNS cache locking
- C. DNS Security Extensions (DNSSEC)
- D. The global query block list.

Correct Answer: D

---

### QUESTION 5

You have a Windows Server 2012 R2 failover cluster that contains four nodes. Each node has four network adapters. The network adapters on each node are configured as shown in the following table.

Network adapter name	Cluster network	Link speed
NIC1	ClusterNetwork1	1 Gbps
NIC2	ClusterNetwork2	1 Gbps
NIC3	ClusterNetwork3	1 Gbps
NIC4	ClusterNetwork4	10 Gbps

NIC4 supports Remote Direct Memory Access (RDMA) and Receive Side Scaling (RSS). The cluster networks are configured as shown in the following table.

Cluster network name	Metric	Role
ClusterNetwork1	39984	1
ClusterNetwork2	39983	1
ClusterNetwork3	79984	3
ClusterNetwork4	79840	3

You need to ensure that ClusterNetwork4 is used for Cluster Shared Volume (CSV) redirected traffic. What should you do?

- A. Set the metric of ClusterNetwork4 to 90,000 and disable SMB Multichannel.
- B. On each server, replace NIC4 with a 1Gbps network adapter.
- C. Set the metric of ClusterNetwork4 to 30,000 and disable SMB Multichannel.
- D. On each server, enable RDMA on NIC4.

Correct Answer: C
