QUESTION 1

You need to implement end-of day processing for Relecloud. What should you include in the implementation?

- A. In the Azure subscription, configure an Azure Batch compute job.
- B. On Server1, install the Integration Pack for Windows Azure.
- C. In the Azure subscription, create a high performance computing (HPC) cluster.
- D. On Server1, install Service Management Automation

Correct Answer: A

QUESTION 2

You need to identify which backup solution meets the technical requirements. What should you identify?

- A. A system state backup of LON-SQL1
- B. A backup of the Windows\DigitalLocker folder on LON-DC2
- C. A system state backup of MON-DC1
- D. A backup of the Windows\DigitalLocker folder on MON-DC2

Correct Answer: C

QUESTION 3

You deploy System Center 2012 R2 Operations Manager to a server named Server1 that runs Windows Server 2012 R2.

Your company has a public website that is hosted in Microsoft Internet Information Services (IIS).

You need to use Operations Manager to monitor the availability of the public website from the United States, Europe, Asia, and Australia.

What should you do on Server1? To answer, select the appropriate options in the answer area.

First management pack to import:

Second management pack to import:

Windows feature to install:

QUESTION 4

Your company has a datacenter in Los Angeles. The datacenter contains a server named VMM1 that has System Center 2012 Virtual Machine Manager (VMM) installed.

You plan to deploy a service named SRV1. SRV1 will contain three tiers. Each tier will contain 8 instances.

You need to configure the service template to ensure that when an application in SRV1 is upgraded, SRV1 remains available.

What should you configure for each tier?

- A. the preferred deployment order
- B. the maximum instance count

- C. the minimum instance count
- D. the number of upgrade domains
- E. the preferred servicing order

Correct Answer: D

<http://technet.microsoft.com/en-us/library/gg675089.aspx> To minimize service interruptions when a tier is updated in-place, you can specify more than one upgrade domain in the tier properties. When the tier is updated, VMM updates the virtual machines in the tier according to the upgrade domain to which they belong. VMM upgrades one upgrade domain at a time, shutting down the virtual machines running within the upgrade domain, updating them, bringing them back online, and then moving on to the next upgrade domain. By shutting down only the virtual machines running within the current upgrade domain, VMM ensures that an upgrade takes place with the least possible impact to the running service.

QUESTION 5

You need to identify which MAC address pool must be used to meet the requirements for the private cloud infrastructure.

How should you configure the address pool for the private cloud? (To answer, drag the appropriate MAC addresses to the correct location. Each MAC address may be used once, more than once, or not at all. You may need to drag the split

bar between panes or scroll to view content.)

Select and Place:

MAC Addresses

00-00-00-15-00-00

00-15-00-00-00-00

00-15-00-30-00-00

00-15-30-00-00-00

00-16-00-00-00-00

Answer Area

Starting MAC address: MAC address

Ending MAC address: MAC address

Correct Answer:

MAC Adresses	Answer Area
00-00-00-15-00-00	Starting MAC address: 00-15-00-00-00-00
	Ending MAC address: 00-15-00-30-00-00
00-15-30-00-00-00	
00-16-00-00-00-00
