QUESTION 1

Your network contains a Remote Desktop Services (RDS) session collection named Collection1.

You need to configure which users can connect to the Remote Desktop Session Host (RD Session Host) servers in Collection1.

What should you configure from the properties of Collection1?

- A. Security
- B. Connections
- C. User Groups
- D. Client Settings

Correct Answer: C

Remote Desktop Services accelerates and extends desktop and application deployments to any device, improving remote worker efficiency, while helping to keep critical intellectual property secure and simplify regulatory compliance. Remote

Desktop Services enables virtual desktop infrastructure (VDI), session-based desktops, and applications, allowing users to work anywhere.

Remote Desktop Services (RDS) - Session Collection There are basically two types of RDS collections, Virtual Machine and Session.

-A Virtual Desktop collection deals with managing pools of VM desktops that can be made available to users (or they can also be dedicated to specific users). -A Session collection is the old Terminal Services model. In Windows Server 2008

R2, the RemoteApp feature was introduced which allowed for seamless published applications. RemoteApp is also part of RDS in 2012 (but much easier to manage).

QUESTION 2

You need to recommend an image type to start the client computers in the London office. The solution must meet the migration requirements.

Which image type should you recommend?

- A. capture
- B. boot
- C. install
- D. discover

Correct Answer: D

- Ensure that the client computers in the London office that are not PXE-capable can download images from WDS.
- Reformat the existing disks in the London office during the migration to Windows 8. A discover image is a type of boot image that you can use to install an operating system on a computer that is not capable of network booting using the Pre-

Boot Execution Environment (PXE). You may want to use a discover image in the following scenarios:

A client is not PXE-enabled.

A client is on a different subnet and you do not have method of getting PXE to the client (for example, IP helper tables or Dynamic Host Control Protocol (DHCP)). You have many Windows Deployment Services servers and want to target a

specific server.

QUESTION 3

Your network contains a Virtual Desktop Infrastructure (VDI).

You plan to deploy an application named App1 to the virtual desktops. App1 requires a minimum display resolution of 1280 x 1024

You need to identify the maximum number of virtual displays that each virtual desktop can use when running App1.

How many virtual displays should you identify?

- A. 1
- B. 2
- C. 3
- D. 4

Correct Answer: B

<http://technet.microsoft.com/en-us/library/ff817602%28WS.10%29.aspx>

Maximum resolution	Maximum number of monitors in virtual machine setting			
	1 monitor	2 monitors	3 monitors	4 monitors
1024 x 768	75 MB	105 MB	135 MB	165 MB
1280 x 1024	125 MB	175 MB	225 MB	275 MB
1600 x 1200	184 MB	237 MB	330 MB	N/A
1920 x 1200	220 MB	308 MB	N/A	N/A

Note
In addition to the previous video memory table, Windows Server 2008 R2 with SP1 has been tested for up to 12 virtual machines per GPU, for a total of 24 virtual machines on two physical GPUs, providing the necessary dedicated video memory. This number will continue to be refined in later releases.

QUESTION 4

Your network contains an Active Directory domain named contoso.com. Domain controllers run either Windows Server 2008 R2 or Windows Server 2012. All client computers run Windows 8.

Each user has a laptop computer.

You enable Folder Redirection and you configure the Redirect folders on primary computers only Group Policy setting.

You need to ensure that user folders are redirected only when the users log on to their personal laptop computer.

What should you modify?

- A. The msDS-PrimaryComputer attribute of each computer
- B. The msDS-PrimaryComputer attribute of each user
- C. The msTSPimaryDesktop attribute of each user
- D. The msTSPimaryDesktop attribute of each computer

Correct Answer: B

<http://www.grouppolicy.biz/2012/03/how-to-configure-a-primary-computer-a-k-a- msdsprimarycomputer-property-in-windows-8/> <http://blogs.technet.com/b/filecab/archive/2012/03/30/configuring-primary-computers-for- folder-redirection-and-roaming-profiles-in-windows-server-8-beta.aspx>

QUESTION 5

You have a Microsoft Application Virtualization (App-V) publishing server named Server1.

Some users connect to the network by using a cellular connection.

You need to prevent the users from downloading App-V packages the first time they run the application that is associated to the package.

What should you do?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. From a Group Policy object (GPO), configure the App-V Streaming settings.
- B. From a Group Policy object (GPO), configure the App-V Publishing settings.
- C. From each client computer, run the Set-AppvClientConfiguration cmdlet.
- D. From each client computer, run the Set-AppvClientPackage cmdlet.

Correct Answer: A
