QUESTION 1

You need to recommend a solution for protecting the files stored on the laptop computers of the sales users. The solution must meet the sales department requirements. What should you recommend?

- A. BitLocker Drive Encryption (BitLocker) that uses a SID-based protector.
- B. BitLocker Drive Encryption (BitLocker) that uses a password protector.
- C. Encrypting File System (EFS) that uses certificates from a certification authority (CA).
- D. Encrypting File System (EFS) that uses self-signed certificates.

Correct Answer: B

-All of the files on the laptop computers must be encrypted.

Active Directory SID-based protector. This protector can be added to both operating system and data volumes, although it does not unlock operating system volumes in the pre-boot environment. The protector requires the SID for the domain

account or group to link with the protector. BitLocker can protect a clusteraware disk by adding a SID-based protector for the Cluster Name Object (CNO) that lets the disk properly failover to and be unlocked by any member computer of the

cluster.

The ADAccountOrGroup protector requires the use of an additional protector for use (such as TPM, PIN, or recovery key) when used on operating system volumes To add an ADAccountOrGroup protector to a volume requires either the

actual domain SID or the group name preceded by the domain and a backslash. In the example below, the CONTOSO\Administrator account is added as a protector to the data volume G.

Active Directory-based protectors are normally used to unlock Failover Cluster enabled volumes.

QUESTION 2

You need to meet the application requirements for administering the App-V infrastructure. What should you install on Server1?

- A. The Microsoft Visual C++ 2010 Redistributable Package
- B. Microsoft SQL Server Native Client
- C. Microsoft .NET Framework 4.5
- D. Microsoft Silver light

Correct Answer: D

<http://technet.microsoft.com/en-us/library/jj713458.aspx>

Management console requires Silverlight, Visual C++2010 SP1, and .Net 4.0.

QUESTION 3

You need to configure a Group Policy object (GPO) that meets the security requirements of the users in the New York office. Which Group Policy settings should you configure?

- A. Allow installation of devices that match any of these device setup classes Prevent installation of devices not described by other policy settings.
- B. All Removable Storage classes: Deny all access Prevent installation of devices not described by other policy settings.
- C. Allow installation of devices that match any of these device setup classes Prevent installation of devices using drivers that match these device setup classes.
- D. All Removable Storage classes: Deny all access Prevent installation of devices using drivers that match these device setup classes.

Correct Answer: A

You'd first allow installation of specific classes and then prevent all others.

Prevent installation of devices not described by other policy settings.

This policy setting controls the installation of devices that are not specifically described by any other policy setting. If you enable this policy setting, users cannot install or update the driver for devices unless they are described by either the

Allow installation of devices that match these device IDs policy setting or the Allow installation of devices for these device classes policy setting. If you disable or do not configure this policy setting, users can install and update the driver for

any device that is not described by the Prevent installation of devices that match these device IDs policy setting, the Prevent installation of devices for these device classes policy setting, or the Prevent installation of removable devices policy setting.

QUESTION 4

You need to recommend a solution to deploy App1. The solution must meet the application requirements. What should you include in the recommendation?

- A. Create an .rdp file for App1, and then copy the file to the client computers by using a logon script.
- B. Configure the software installation settings in a Group Policy object (GPO).
- C. Configure the RemoteApp and Desktop Connections setting in a Group Policy object (GPO).
- D. Create an .rdp file for App1, and then copy the file to the client computers by using a startup script.

Correct Answer: C

Using a GPO to set the RA and RD Connections allows you to input a URL that publishes the applications and then allows them to use document invocation.

QUESTION 5

Your network contains client computers that run Windows 8.

An administrator deploys a Group Policy object (GPO) that disables the following:

Desktop gadgets

Microsoft accounts

User Account Control (UAC)

The Program Compatibility Assistant

You discover that Windows Store applications cannot run on the client computers that are targeted by the new GPO. You verify that non-Windows Store applications run successfully.

You need to ensure that all of the applications start correctly on the client computers that are targeted by the GPO.

What should you enable in the GPO?

A.

Microsoft accounts

B.

The Program Compatibility Assistant

C.

UAC

D.

Desktop gadgets

Correct Answer: C
