QUESTION 1

Click the Exhibit button. You are responsible for maintaining a small Communication Server 1000 RIs. 7 x SA system. The customer decided against using Basic Automatic Route Selection (BARS) for call routing. They are now reporting that the user of extension 2001 is blocked when attempting to dial local call using the COT access code.

Based on the exhibit, what adjustments should be made to the system to allow the user of extension 2001 to dial local calls only by directly accessing the COT Route?

- A. Change the Class of Service of extension 2001 to Semi Restricted (SRE) and leave the TGAR setting of two (2) on the COT Route.
- B. Change the TGAR of extension 2001 to zero and leave the Class of Service setting of Toll Denied (TLD) on extension 2001.
- C. Change the Class of Service of extension 2001 to Conditionally Unrestricted (CUN), leave the TGAR setting of two (2) on the COT Route.
- D. Change the TGAR of the COT Route to zero and change the Class of Service setting of extension 2001 to Conditionally Toll Denied (CTD)

Correct Answer: D

QUESTION 2
