QUESTION 1

You need to configure the Lync 2013 Bandwidth Calculator to provide a visual alert when the volume of Lync traffic at Contoso exceeds the maximum allowed threshold. What should you do?

- A. For the Contoso office in Vancouver, update the value for WAN link BW allocated for RTC traffic to 5 Mbps.
- B. In the global definitions, update the value of the Flag in Red parameter to 50%.
- C. For the Contoso office in Seattle, update the value for WAN link BW allocated for RTC traffic to 5 Mbps.
- D. In the global definitions, update the value of the Flag in Red parameter to 25%.

Correct Answer: D

/ Volume of Lync traffic does not exceed 25 percent of the WAN bandwidth

QUESTION 2

Your company corporate telephony environment is a combination of Lync 2013 and traditional Private Branch Exchange (PBX). The company has 3,500 users at three sites that use a Multiprotocol Label Switching (MPLS) topology. On average, the company has 3 percent of its users dialing in for conferences and 7 percent on a public switched telephone network (PSTN) call at any time.

The company plans to remove the PBXs and have all users use only Lync 2013. The company also plans to migrate from an existing content sharing platform.

You need to generate a persona by using IP-based unified communication (UC) scenarios.

Which three pieces of information should you collect when you are defining a persona for the existing communications? (Each correct answer presents part of the solution. Choose three.)

- A. conference sessions
- B. voice codec used
- C. PSTN-to-PSTN sessions
- D. peer-to-peer (P2P) sessions
- E. content sharing

Correct Answer: ADE

User Guide Microsoft Lync Server 2010 and 2013 Bandwidth Calculator

QUESTION 3

You need to perform an additional traffic simulation for validating Lync Server implementation in the call centers. What should be the minimum duration of the simulation?

- A. one week, business hours only
- B. one week, 24 hours a day
- C. one month, business hours only
- D. one month, 24 hours a day

Correct Answer: B

As a best practice, Lync Server traffic simulation scenarios for a specific site should include:

Running for a minimum of one week.

Running 24 hours a day.

QUESTION 4

You need to collect troubleshooting information to analyze the Enterprise Voice functionality issues at the Seattle office during the Proof of Concept (POC) testing.

Which five steps should you perform in sequence? (To answer, move the appropriate five actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

- Run the **Start-csclslogging** cmdlet.
- Run the **Stop-csclslogging** cmdlet.
- Run the **Search-csclslogging** cmdlet.
- Reproduce the issue by making test calls.
- Run the **discontroller.exe -dump -scenario** command.
- Run the **Sync-csclslogging** cmdlet.

Correct Answer:

Run the **Start-csclslogging** cmdlet.

Reproduce the issue by making test calls.

Run the **Sync-csclslogging** cmdlet.

Run the **Stop-csclslogging** cmdlet.

Run the **Search-csclslogging** cmdlet.

Run the **dscontroller.exe -dump scenario** command.

Note:

* start-csclslogging

Starts the specified scenario centralized logging service scenario. Centralized logging provides a way for administrators to simultaneously enable or disable Lync Server 2013 tracing on multiple computers.

* Stop-CsClsLogging

Stops the specified scenario centralized logging service scenario. Centralized logging provides a way for administrators to simultaneously enable or disable Lync Server 2013 tracing on multiple computers.

* Sync-CsClsLogging

Flushes the centralized logging service cache

When a scenario is being logged, the service will maintain data in memory and then periodically write that data to disk. However, at any time administrators can run the Sync-CsClsLogging cmdlet to "flush" the data cache. When this is done,

all the logging data currently in memory will be written to disk, the data caches will be cleared, and the log files will be available for searching.

* Search-CsClsLogging

Provides a command-line option for searching the centralized logging service log files.

Lastly we capture the data:

Start-CsClsLogging

QUESTION 5

You need to recommend changes to improve the quality of Lync calls for users in the Detroit and Chicago offices. Which change should you recommend?

- A. Upgrade the data center's Multiprotocol Label Switching (MPLS) link to 1,100 megabits per second (Mbps).
- B. Implement Quality of Service (QoS).
- C. Upgrade the wide area network (WAN) links at these offices to 30 megabits per second (Mbps).
- D. Connect the offices to the Multiprotocol Label Switching (MPLS) network from Provider-1.

Correct Answer: D
