QUESTION 1

You work as an Office Assistant for Blue Well Inc. The company has a Windows-based network. You want to make a slicer available for use in another PivotTable. Which of the following steps will you take to accomplish the task?

Each correct answer represents a part of the solution. Choose all that apply.

- A. Click the Insert Slicer arrow, and then click Slicer Connections on the Options tab in the Sort and Filter group.
- B. In the Slicer Connections dialog box, clear the check box of any PivotTable fields for which you want to disconnect a slicer.
- C. In the PivotTable Connections dialog box, select the check box of the PivotTables in which you want the slicer to be available.
- D. Click the slicer that you want to share in another PivotTable.

Correct Answer: CD

QUESTION 2

You work as an Office Assistant for Tech Tree Inc. You have created a report in a workbook in

Microsoft Excel 2013. You want to export XML data to your Excel 2013 worksheet. On exporting the XML data, the following error message appears:

"XML MAPS IN MY WORKBOOK ARE NOT EXPORTABLE"

Which of the following are the reasons that are causing the above error? Each correct answer represents a complete solution. Choose all that apply.

- A. The maxoccurs attribute is not equal to 1.
- B. The relationship of the mapped element with other elements is not preserved.
- C. The element is a recursive structure.
- D. The XML map associated with this XML table contains one or more required elements that are not mapped to the XML table.

Correct Answer: AB

The various issues with exporting XML data are as follows:

1.

MAP CAN BE EXPORTED BUT SOME REQUIRED ELEMENTS ARE NOT MAPPED:

This error occurs under the following situations:

The XML map associated with this XML table contains one or more required elements that are not mapped to the XML

table. The element is a recursive structure. The XML table contains a variety of mixed content.

2.

EXCEL CANNOT SAVE THE WORKBOOK BECAUSE IT DOES NOT CONTAIN ANY XML MAPPINGS: Excel cannot save the user's workbook in the XML Data file unless one or more mapped ranges are created.

3.

XML MAPS IN MY WORKBOOK ARE NOT EXPORTABLE: An XML mapping cannot be exported if the relationship of the mapped element with other elements is not preserved due to the following reasons:

The mapped element's schema definition is contained within a sequence with the following attributes:

The maxoccurs attribute is not equal to 1.

The sequence has more than one direct child element defined or has an extra compositor as a direct child.

Nonrepeating sibling elements with the same repeating parent element are mapped to dissimilar XML tables.

Various repeating elements are mapped to the same XML table and the recurrence is not defined by an ancestor element.

Child elements from various parents are mapped to the same XML table. XML schema constructs a list of lists, denormalized data, or a choice construct.

QUESTION 3

You work as an Office Assistant for Blue Well Inc. The company has a Windows-based network. You are creating a chart in Excel 2013. You want to show the slope of data points in the chart to know the trend of the Business Intelligence data range. Which of the following will you use to accomplish the task?

- A. Trendline
- B. Sparkline
- C. Backstage view
- D. Line charts

Correct Answer: A

A trendline is defined in Excel 2013. It is a data visualization tool to display the trend of a particular data range. It is used to show the slope of data points in a chart. There are various types of trendlines, such as linear trendlines, exponential trendlines, and linear forecast trendlines. Answer option B is incorrect. A sparkline is defined as a tiny chart in the background of a cell. Unlike charts on an Excel worksheet, sparklines are not objects. It is used because data presented in a row or column is useful, but patterns can be hard to spot at a glance. It is used to display a trend based on adjacent data in a clear and compact graphical representation by taking up a small amount of space. The benefit of using the sparklines is that these can be printed when a user prints a worksheet that contains them. This feature is not available in charts. Answer option C is incorrect. The Microsoft Office Backstage view is used to replace the traditional file menu with a new approach that uses In and Out features for efficiency. The improved Ribbon enables users to access their preferred commands rapidly and create custom tabs to personalize the way they work. Answer option D is incorrect. Excel provides a column chart facility to display data that is arranged in columns or rows on a worksheet. Line charts are used to display continuous data over time, set against a common scale. In a line chart, category data is distributed along the horizontal axis, and all value data is distributed along the vertical axis. Line charts are ideal for showing trends

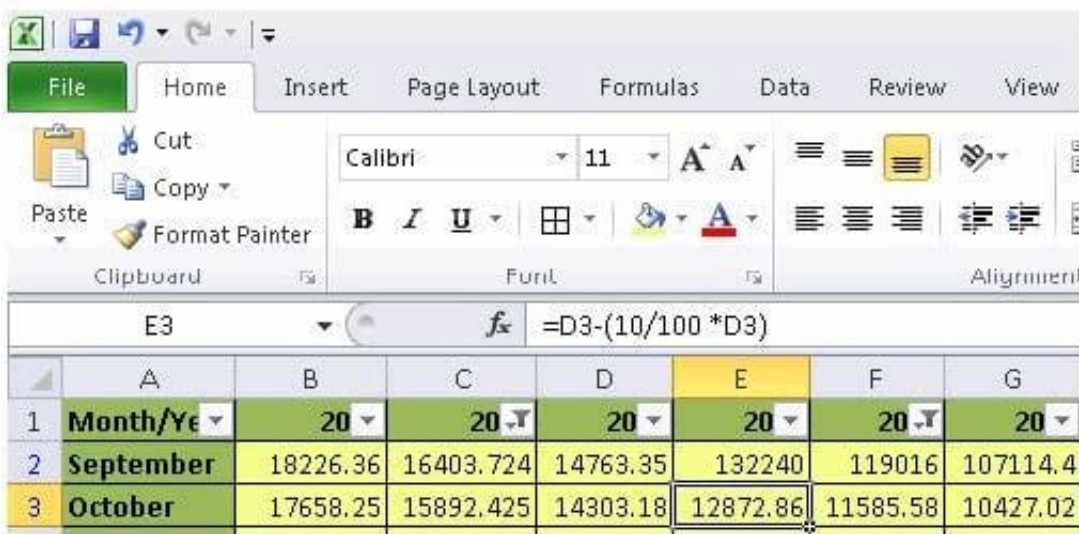

in data at equal intervals.

A line chart should be used where category labels are text, and are representing evenly spaced values such as months, quarters, or years.

QUESTION 4

You work as a technician in Tech Perfect Inc. The Network Administrator of the company installs the Microsoft Excel 2013 application on the network. You open the application and see various changes in Excel 2013. You have to open an existing worksheet through the application. You are unable to find the Office button.

Mark the option that you will click to accomplish the task.

Hot Area:

The screenshot shows the Microsoft Excel 2013 interface. The ribbon is set to 'Formulas'. The formula bar shows the formula $=D3-(10/100 * D3)$ for cell E3. The spreadsheet data is as follows:

	A	B	C	D	E	F	G
1	Month/Year	20	20	20	20	20	20
2	September	18226.36	16403.724	14763.35	132240	119016	107114.4
3	October	17658.25	15892.425	14303.18	12872.86	11585.58	10427.02

Correct Answer:

This screenshot is identical to the one above, showing the same Excel spreadsheet. The 'File' button in the ribbon is highlighted in green, indicating it is the correct answer to the question.

You will have to click File button to accomplish the task. Clicking the File button will open the full-screen Backstage View of the sheet.

QUESTION 5

Rick works as a Sales Manager for Tech Perfect Inc. He is creating a report in Excel 2013. He has entered data in five worksheets in a workbook. He wants to enter a disclaimer message in the A1 cell of each sheet in the workbook as shown in the image given below:

	A	B	C	D	E
1	Disclaimer: This document is				
2	Sales Report	Tech Perfect Inc.			
3					
4	Name	January	February	March	Total First Quarter
5	Mark	\$2,000.00	\$2,750.00	\$3,700.00	\$8,450.00
6	David	\$1,000.00	\$1,900.00	\$2,900.00	\$5,800.00
7	Mariah	\$1,750.00	\$2,350.00	\$3,200.00	\$7,300.00
8	Sarah	\$2,200.00	\$2,750.00	\$3,810.00	\$8,760.00
9	Sasha	\$3,100.00	\$2,900.00	\$4,150.00	\$10,150.00
10	Total				\$8,092.00

Which of the following is the easiest way to accomplish the task?

- A. Write a disclaimer message in the A1 cell of the first sheet. Copy the disclaimer message and paste it on the remaining sheets.
- B. Write a disclaimer message in the A1 cell of the first sheet. In the other sheets, insert a formula that points to the A1 cell of the first worksheet.
- C. Select all the five sheets. Click the first sheet. Write a disclaimer message in the A1 cell of the active sheet.
- D. Select all the five sheets. Write a disclaimer message in the A1 cell of the active sheet.

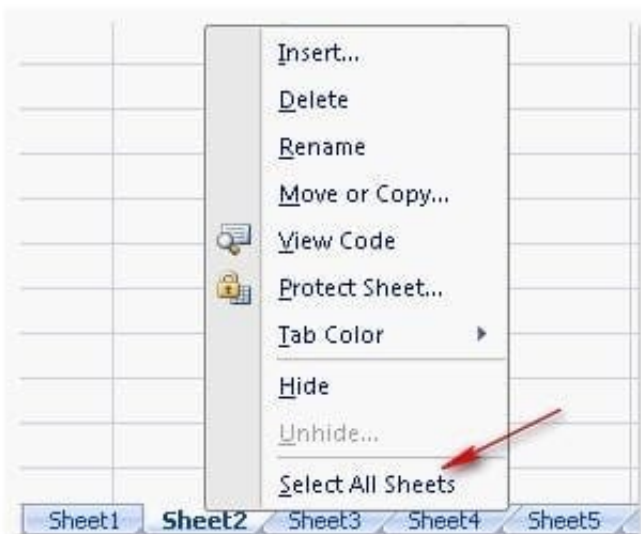

Correct Answer: D

In order to accomplish the task, Rick should take the following steps: Select all the five sheets.

Write a disclaimer message in the A1 cell of the active sheet. Grouping of sheets is a feature provided in Microsoft Office Excel 2013. Selecting more than one sheet groups those sheets. When multiple sheets are grouped, data that a user

enters or edits in the active sheet is reflected in all sheets in the group. To select all sheets, right-click a sheet

tab, and then click Select All Sheets on the shortcut menu.

Users can select multiple sheets by holding the Ctrl key while clicking the sheets. Answer option C is incorrect. Clicking

the first sheet after selecting all sheets will ungroup the sheets and the message will only get inserted in the first sheet. Answer options B and A are incorrect. Both these options will work, but Rick will have to work more than required. Grouping sheets is a better option to work simultaneously on multiple sheets. Users can select multiple sheets by holding the Ctrl key while clicking the sheets. Answer option C is incorrect. Clicking the first sheet after selecting all sheets will ungroup the sheets and the message will only get inserted in the first sheet. Answer options B and A are incorrect. Both these options will work, but Rick will have to work more than required. Grouping sheets is a better option to work simultaneously on multiple sheets.
