QUESTION 1

You need to control which Microsoft Office updates are automatically deployed to client computers. Which tool should you use?

- A. Microsoft Office SharePoint Services (MOSS)
- B. Windows Server Update Services (WSUS)
- C. Windows Update
- D. Microsoft Office Update

Correct Answer: B

Windows Server Update Services (WSUS) enables information technology administrators to deploy the latest Microsoft product updates to computers that are running the Windows operating system. By using WSUS, administrators can fully manage the distribution of updates that are released through Microsoft Update to computers in their network.

QUESTION 2

You work as a Server Administrator for company Inc. The company has a Windows 2016-based Active Directory network.

You are assigning NTFS permissions to the E:\Projects folder for the Marketing group. You want to ensure that the members of the Marketing group can list the contents of the folder and read the data of files contained in the folder, but none of them can change or delete data from the folder.

Which of the following permissions will you apply?

- A. Write
- B. Full control
- C. Read
- D. Modify

Correct Answer: C

You should apply Read permission to the E:\Projects folder for the Marketing group. After applying this NTFS permission, the members of the Marketing group can list the contents of the folder and read the data of files contained in the folder, but none of them can change or delete data from the folder.

Incorrect Answers:

- A: Write permission allows users to write in files or folders.
 - B: Full Control permission allows users to make changes in files or folders.
 - D: Modify permission allows users to make changes in files and folders.
-

QUESTION 3

Which two services should you use to ensure that your networked computers and servers automatically maintain the latest security patches? (Choose two.)

- A. Windows Server Update Service
- B. Update command in Programs and Features
- C. Microsoft Windows Update
- D. Driver Update in Hardware Properties

Correct Answer: AC

A: Windows Server Update Services (WSUS) enables information technology administrators to deploy the latest Microsoft product updates to computers that are running the Windows operating system. By using WSUS, administrators can fully manage the distribution of updates that are released through Microsoft Update to computers in their network.

C: Windows Update keeps a Windows PC up to date.

QUESTION 4

What port does Internet Printing use?

- A. 80
- B. 9100
- C. 443
- D. 1801

Correct Answer: A

When you print using Internet Printing, you are printing using HTTP commands. Therefore, you are using port 80.

QUESTION 5

Which of the following tools will you use to view information about the use of hardware and software resources of a particular system in real time?

- A. Event Viewer
- B. Performance Monitor
- C. Server Manager
- D. Resource Monitor

Correct Answer: B

Performance Monitor is a Windows tool that monitors system and network resources. It is used to get statistical data about the hardware and software components of a server.

Incorrect Answers:

A: The Event Viewer allows checking of the log of multiple servers. Diagnostic logging helps in figuring out problems on several servers (with the databases on those servers), and for the diagnostic logging, the user can view event logs with the Event Viewer in Windows or the Web Event Viewer in SharePoint Central Administration.

C: Server Manager is a primary tool available in Windows Server 2016. It manages and secures multiple server roles in an enterprise. The Server Manager console allows an administrator to perform the following tasks:

Install Windows Server roles and features. View the Event Viewer logs.

Access performance monitoring tools, Device Manager, Task Scheduler, Windows Firewall with Advanced Security, Services, Local Users and Groups, Windows Server Backup, and Disk management.

D: Resource Monitor is a suite of administration tools designed to provide a quick overview of a single user interface. It can be launched from the start menu or from the Task Manager using the Performance tab. Resource monitor displays real-time information about hardware resources but not software resources.
