QUESTION 1

You create a new domain.

Which two Active Directory objects will be available by default? (Choose two.)

- A. Computer
- B. Employee
- C. User
- D. Device
- E. Server

Correct Answer: AC

An Active Directory structure is an arrangement of information about objects. The objects fall into two broad categories: resources (e.g., printers) and security principals (user or computer accounts and groups). Security principals are assigned unique security identifiers (SIDs).

Note:

Install-ADDSDomain installs a new Active Directory domain configuration.

QUESTION 2

Which of the following will you use to diagnose and recover from serious errors that may prevent Windows Server 2016 operating systems from booting successfully?

- A. Windows RE
- B. Windows DS
- C. Windows AIK
- D. Windows SIM

Correct Answer: A

Windows Recovery Environment (WinRE) is a recovery environment that can repair common causes of unbootable operating systems. WinRE is based on Windows Preinstallation Environment (Windows PE), and can be customized with additional drivers, languages, Windows PE Optional Components, and other troubleshooting and diagnostic tools. By default, WinRE is preloaded into the Windows 10 for desktop editions (Home, Pro, Enterprise, and Education) and Windows Server 2016 installations.

Incorrect Answers:

B: Windows Deployment Services (Windows DS) is a new and redesigned Windows Server version of Remote Installation Services (RIS). Windows DS is used to install operating systems to set up new computers through a network without having to be physically present at each computer and without having to install directly from a CD or DVD.

Windows DS is commonly used to deploy Windows operating systems in large to medium size business environment computers.

C: The Windows Automated Installation Kit (Windows AIK) is a set of tools and documentation provided with Windows operating system. It supports the configuration and deployment of Windows operating systems. Administrators can use Windows AIK for automating Windows installations, capturing Windows images with ImageX, configuring and modifying images, creating Windows PE images, and migrating user profiles and data. Windows AIK includes various Windows tools such as Volume Activation Management Tool (VAMT), Users State Migration Tools (USMT), etc.

D: Windows System Image Manager (Windows SIM) is a Windows tool that is used to create answer files (unattended.xml) and network shares. It is also used to modify files available in a configuration set. This answer file is then transferred to the master computer, which is used for creating the installation image.

QUESTION 3

You turn on a computer. What happens first?

- A. The operating system is loaded.
- B. The boot sector is accessed.
- C. The BIOS is loaded.
- D. The Master Boot Record (MBR) is accessed.

Correct Answer: C

QUESTION 4

You want to receive a notification when your server's processor exceeds 80 percent utilization. You should create a:

- A. Performance Alert.
- B. Scheduled task.
- C. Performance Log.
- D. Performance counter.
- E. System Event.

Correct Answer: A

QUESTION 5

You need to make a share hidden. Which symbol should you append to the share name?

- A. _

B. !

C. @

D. #

E. \$

Correct Answer: E

The "\$" appended to the end of the share name means that it is a hidden share. Windows will not list such shares among those it defines in typical queries by remote clients to obtain the list of shares. One needs to know the name of an administrative share in order to access it. Not every hidden share is administrative share; in other words, ordinary hidden shares may be created at user's discretion.
