QUESTION 1

Match each Microsoft cloud service to the feature it provides.

To answer, drag the appropriate Microsoft cloud service from the column of the left to its feature on the right. Each service may be used once, more than once, or not at all. Each correct match is worth one point.

NOTE: Each correct selection is worth one point.

Select and Place:

Microsoft cloud service	Answer Area	
SharePoint Online	virtual machines	
Azure	video calls	
Skype for Business	document library	

Correct Answer:

Microsoft cloud service	Answer Area	
	virtual machines	Azure
	video calls	Skype for Business
	document library	SharePoint Online

QUESTION 2

Which is a feature Active Directory Rights Management Services (AD RMS)?

- A. manages Digital Rights Media (DRM) for digital media
- B. provides a permissions system that works with any cloud-based storage solution
- C. manages share and file permissions on all servers in enterprise
- D. allow users to define who can open, modify, print, or forward a document

Correct Answer: D

Windows Rights Management Services (also called Rights Management Services, Active Directory Rights Management Services or RMS) is a form of Information Rights Management used on Microsoft Windows that uses encryption and a

form of selective functionality denial for limiting access to documents such as corporate e-mail, Word documents, and web pages, and the operations authorized users can perform on them. Companies can use this technology to encrypt information stored in such document formats, and through policies embedded in the documents, prevent the protected content from being decrypted except by specified people or groups, in certain environments, under certain conditions, and for certain periods of time.

QUESTION 3

This question requires that you evaluate the underlined text to determine if it is correct.

The "ExFAT" file system can automatically verify and auto correct data to avoid file system errors.

Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice than makes the statement correct.

- A. No change is needed
- B. NTFS
- C. FAT32
- D. ReFS

Correct Answer: D

Resilient File System (ReFS) is a Microsoft proprietary file system introduced with Windows Server 2012 with the intent of becoming the "next generation" file system after NTFS. ReFS key design advantages are intended to include automatic

integrity checking and data scrubbing, removing the need for chkdsk and protecting against data degradation.

Incorrect answers:

Not A: exFAT (Extended File Allocation Table) is a Microsoft file system optimized for flash drives. exFAT can be used where the NTFS file system is not a feasible solution (due to data structure overhead), or where the file size limit of the standard FAT32 file system is unacceptable.

QUESTION 4

This question requires that you evaluate the underlined text to determine if it is correct.

You are personalizing the Start screen on a Windows 10 computer.

To create a new group of tiles on the Start Screen, select a tile and press F12.

Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice than makes the statement correct.

- A. No change is needed
- B. access Settings > Personalize > Start
- C. right-click a tile and close Add to new group
- D. drag a tile to the far-right side of the Start screen and drop it

Correct Answer: D

QUESTION 5

This question requires that you evaluate the underlined text to determine if it is correct.

"Windows Server Active Directory" enables single sign-on, which simplifies user access to thousands of cloud applications on Windows, Mac and iOS devices. Instructions: Review the underlined text. If it makes the statement correct, select

"No change is needed". If the statement is incorrect, select the answer choice than makes the statement correct.

- A. No change is needed
- B. Microsoft Account
- C. Active Directory Rights Manager
- D. Azure Active Directory

Correct Answer: D

Azure Active Directory is a comprehensive identity and access management cloud solution that provides a robust set of capabilities to manage users and groups. Azure Active Directory enables single sign-on to simplify user access to thousands of cloud applications from Windows, Mac, Android and iOS devices.
