QUESTION 1

This question requires that you evaluate the underlined text to determine if it is correct.

When BitLocker is enabled and protecting a local drive, Trusted Platform Module (TPM) provides "pre-start system integrity verification for system and operating system drives". Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. 256-bit encryption that uses Advanced Encryption Standard (AES)
- C. a location that stores recovery keys for removable drives
- D. boot sector mapping for the startup process

Correct Answer: C

Computers that incorporate a TPM have the ability to create cryptographic keys and encrypt them so that they can be decrypted only by the TPM. This process, often called "wrapping" or "binding" a key, can help protect the key from disclosure. Each TPM has a root "wrapping" key, called the Storage Root Key (SRK), which is stored within the TPM itself. The private portion of a key created in a TPM is never exposed to any other component, software, process, or person.

QUESTION 2

You manage desktop computers for your university's computer labs. You recently upgraded these computers to Windows 8.1. You need to modify the configuration of the new computers to increase the number of items displayed in jump lists. Which configuration tool should you use?

- A. Display Options
- B. Control Panel Personalization applet
- C. Device Manager
- D. Taskbar properties

Correct Answer: D

By default up to 10 items can be added to a button's Jump List. For privacy reasons you may wish to reduce or eliminate this number. Conversely, if you find Jump Lists extremely useful you may wish to increase the number of displayed items.

1.

Right-click an empty area of the taskbar and choose "Properties".

2.

The "Taskbar and Start Menu Properties" multi-tabbed dialog box appears. Click the "Start Menu" tab.

3.

Click the "Customize" button.

4.

The "Customize Start Menu" dialog box appears. Underneath "Start menu size", next to "Number of recent items to display in Jump Lists", enter/select a value from 0-60.

QUESTION 3

Which is a feature Active Directory Rights Management Services (AD RMS)?

- A. manages Digital Rights Media (DRM) for digital media
- B. provides a permissions system that works with any cloud-based storage solution
- C. manages share and file permissions on all servers in enterprise
- D. allow users to define who can open, modify, print, or forward a document

Correct Answer: D

Windows Rights Management Services (also called Rights Management Services, Active Directory Rights Management Services or RMS) is a form of Information Rights Management used on Microsoft Windows that uses encryption and a form of selective functionality denial for limiting access to documents such as corporate e-mail, Word documents, and web pages, and the operations authorized users can perform on them. Companies can use this technology to encrypt information stored in such document formats, and through policies embedded in the documents, prevent the protected content from being decrypted except by specified people or groups, in certain environments, under certain conditions, and for certain periods of time.

QUESTION 4

Match each Microsoft Virtual desktop feature to its definition.

Instructions: To answer, drag the appropriate feature from the column of the left to its definition on the right. Each feature may be used once, more than once, or not at all. Each correct match is worth one point.

Select and Place:

Microsoft Virtual Desktop

Microsoft Remote Desktop App

Multi-touch remote

RemoteApp programs

User profile disk

Answer Area

behaves and appears like a local application in a user's desktop, with seamless desktop integration and transparent rendering behavior

provides access to applications or full desktops from a variety of devices and platforms, including Windows, Windows RT, iOS, Mac OS X, and Android

supports multi-touch, new Windows experience, and start Menu/screen integration, and enables end users to use the latest devices to interact with their remote Windows 8 desktop

Correct Answer:

Microsoft Virtual Desktop

User profile disk

Answer Area

behaves and appears like a local application in a user's desktop, with seamless desktop integration and transparent rendering behavior

provides access to applications or full desktops from a variety of devices and platforms, including Windows, Windows RT, iOS, Mac OS X, and Android

supports multi-touch, new Windows experience, and start Menu/screen integration, and enables end users to use the latest devices to interact with their remote Windows 8 desktop

RemoteApp programs

Microsoft Remote Desktop App

Multi-touch remote

*

RemoteApp programs RemoteApp enables you to make programs that are accessed remotely through Remote Desktop Services appear as if they are running on the end user's local computer. These programs are referred to as RemoteApp programs. Instead of being presented to the user in the desktop of the Remote Desktop Session Host (RD Session Host) server, the RemoteApp program is integrated with the client's desktop.

*

Microsoft Remote Desktop App Provides access to applications or full desktops from a variety of devices and platforms including Windows, Windows RT, iOS, Mac OS X and Android

*

Multi-touch remote Supports multi-touch, new Windows experience, and Start menu/screen integration. Enables end users to use the latest devices to interact with their remote Windows 8 desktops. The touch experience is fully remote, supporting Windows 8 touch gestures such as pinch, zoom and rotate. QUESTION 5

Your new Windows 8.1 computer is connected to your home wireless network.

You want to share music and photos on your new computer with other members of your family. You want to avoid setting up separate user accounts for each member of your family. A single password for all the shared files will suffice.

Which Windows 8.1 networking feature satisfies these requirements?

- A. Network Discovery
- B. HomeGroup
- C. Virtual Private Network
- D. Broadband (PPPoE)

Correct Answer: B

A homegroup makes it easier to share files and printers on a home network. You can share pictures, music, videos, documents, and printers with other people in your homegroup. Other people can't change the files that you share, unless you give them permission to do so.
