QUESTION 1

You need to analyze the following code segment. Line numbers are included for reference only.

```
01 public void printInt()  
02 {  
03     if (true) {  
04         int num = 1;  
05         if (num > 0) {  
06             num++;  
07         }  
08     }  
09     int num = 1;  
10     addOne(num);  
11     num = num - 1;  
12     System.out.println(num);  
13 }  
14  
15 public void addOne(int num)  
16 {  
17     num = num + 1;  
18 }
```

What is the output of line 12 when you run printInt()?

- A. 0
- B. 1
- C. 2
- D. 3

Correct Answer: A

QUESTION 2

DRAG DROP

You are writing a Java program that collects patient information and stores it in a database.

You need to ensure that the program stores data using the least amount of memory.

Which data type should you use to complete each variable declaration? To answer, drag the appropriate data type from the column on the left to its code segment on the right. Each data may be used once, more than once, or not at all. You

may need to drag the split bar between panes or scroll to view content.

Select and Place:

Data Types

Answer Area

birthYear = 1974;
 exempt = false;
 initial = 'D';
 salary = 22123.5f;

Correct Answer:

Data Types

Answer Area

birthYear = 1974;
 exempt = false;
 initial = 'D';
 salary = 22123.5f;

QUESTION 3

HOTSPOT

You work for Woodgrove Bank as a Java programmer.

You need to evaluate the following class. Line numbers are included for reference only.

```
01 public class Account {
02     protected int balance;
03     public Account() {
04         balance = 0;
05     }
06     public Account(int amount) {
07         balance = amount;
08     }
09 }
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

	Yes	No
The Account class has a single constructor.	<input type="checkbox"/>	<input type="checkbox"/>
Other classes can inherit the Account class.	<input type="checkbox"/>	<input type="checkbox"/>
Line 07 is equivalent to <code>this.balance = amount;</code>	<input type="checkbox"/>	<input type="checkbox"/>

Correct Answer:

Answer Area

	Yes	No
The Account class has a single constructor.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Other classes can inherit the Account class.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Line 07 is equivalent to <code>this.balance = amount;</code>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

QUESTION 4

HOTSPOT

You work as an intern Java programmer at Adventure Works. Your team lead asks you to create a method. The method must meet the following requirements:

Accept an int array

Check for duplicate values in the array

Stop the outer loop as soon as a duplicate value has been detected and return true

Return false if all values in the array are unique How should you complete the code? To answer, select the appropriate code segments in the answer area. NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

```

public static boolean duplicate(int[] array) {

    boolean isDuplicate = false;

    for (   x++) {
        
        
        
        
        
        

        for (int y = x + 1; y < array.length;  )
            if (array[x] == array[y])
                isDuplicate = true;

            if (isDuplicate)
                
    }

    return isDuplicate;
}

```

Correct Answer:

Answer Area

```
public static boolean duplicate(int[] array) {

    boolean isDuplicate = false;

    for (   x++) {
        
        
        
        
        
        
        
        

        for (int y = x + 1; y < array.length;  )
            if (array[x] == array[y])
                isDuplicate = true;

            if (isDuplicate)
                
                
                
                

    }

    return isDuplicate;

}
```

QUESTION 5

DRAG DROP

You are interviewing for a job at Adventure Works, Inc. The hiring manager asks you to create a single console program.

The program takes multiple arguments from the command line and writes them to the screen in the same order as they were typed on the command line.

Which three code segments should you use to develop the solution? To answer, move the appropriate code segments from the list of code segments to the answer area and arrange them in the correct order.

Select and Place:

Code Segments

```
public static void main(String arguments) {  
    for (int i = 0; i < args.length; i++) {  
        System.out.println(args[i]);  
    }  
}  
for (int i = 1; i <= Integer.parseInt(args[0]); i++) {  
    System.out.println(arguments[i]);  
}  
public static void main(String[] args) {  
    for (int i = 0; i < arguments.length; i++) {
```

Answer Area

Correct Answer:

Code Segments

```
public static void main(String arguments) {  
    for (int i = 0; i < args.length; i++) {  
        System.out.println(args[i]);  
    }  
}  
for (int i = 1; i <= Integer.parseInt(args[0]); i++) {  
  
  
  
  

```

Answer Area

```
public static void main(String[] args) {  
    for (int i = 0; i < arguments.length; i++) {  
        System.out.println(arguments[i]);  
    }  
}
```
