QUESTION 1

Your application utilizes ColdFusion components exposed as web services. Which tag allows you to define complex data types for your web service?

- A.
- B.
- C.
- D.

Correct Answer: D

QUESTION 2

You have two instances of Art loaded within the ColdFusion ORM, and you want to modify their corresponding database records within a single atomic operation in the file workWithArt.cfm. What is the best way to accomplish this?

- A. use CFTRANSACTION within Art.cfc
- B. use CFLOCK within Art.cfc
- C. use CFTRANSACTION around the references to both instances within workWithArt.cfm
- D. use CFLOCK around the references to both instances within workWithArt.cfm

Correct Answer: C

QUESTION 3

Your application has the following query that is running slowly: `SELECT * FROM ...`

You want to know the amount of time the query takes so you can log it.

Which variable contains the length of time the query took to run?

- A. data.executionTime
- B. result.data.executionTime
- C. result.timeExecution
- D. data.recordcount

Correct Answer: A

QUESTION 4

You need to execute a stored procedure against a database in your application. What allows you to access the data returned from that call?

- A. the name property of the cfstoredproc tag
- B. the name property of the cfquery tag
- C. the result property of the cfquery tag
- D. the name property of the cfproccresult tag

Correct Answer: D

QUESTION 5

In which situations will ColdFusion validate data types defined by the tag? (Choose two.)

- A. calls to CFC functions from a CFM page
- B. calls to CFC functions from SOAP-based web service clients
- C. calls to CFC functions from another CFC function
- D. when CFC documentation has been generated
- E. calls to CFC functions from a Flex- or Flash-based client over Flash Remoting

Correct Answer: BE
