QUESTION 1

An architect is conducting a discovery on a client's current CMS implementation. The architect must identify which functionality is missing from the client's current implementation.

What should the architect do?

- A. Use documentation provided by the client
- B. Speak to the key stakeholders about how to use the system
- C. Speak to the IT department about how the system is built
- D. Gain access to the system and review code

Correct Answer: B

QUESTION 2

In which type of architecture diagram would the architect be most likely to list the IP addresses of individual servers?

- A. Physical
- B. Logical
- C. Conceptual
- D. Data Flow

Correct Answer: A

QUESTION 3

An architect must incorporate measures to prevent content grabbing. Which two recommendations should the architect configure? (Choose two.)

- A. Apache Sling POST Servlet
- B. Apache Sling GET Servlet
- C. Dispatcher filter section
- D. Dispatcher allowed Clients section

Correct Answer: BC

QUESTION 4

Which three tasks can users achieve with AEM Dispatcher? (Choose three.)

- A. Provide load balancing
- B. Poll AEM for content invalidation
- C. Secure AEM application
- D. Cache HTML content

Correct Answer: ACD

QUESTION 5

A non-profit organization plans to migrate to AEM. The organization uses a content management system with a relational database to store content and HTML forms to input content. Currently, business users must upload images as part of a form element that will be rendered on a page.

During the discovery sessions, business users express major concern with this authoring experience.

Which AEM feature should be described to the business users to reduce their concern?

- A. Authors can search for images and drop them on to pages in edit mode.
- B. AEM can output content in multiple formats (html, json).
- C. Authors can edit the content in place on the pages in edit mode.
- D. AEM can store content in supported RDBMS.

Correct Answer: D
