QUESTION 1

In SAS Data Integration Studio, which statement is FALSE regarding status handling?

A. When a job is executed in SAS Data Integration Studio, a return code for each transformation in the job is captured in a macro variable. The return code for the job is set to the least successful transformation in the job. SAS Data Integration Studio enables you to associate a return code condition, such as Successful, with an action, such as Send Email.

B. If status handling has been defined for a transformation or the job, a macro definition (and a call to it) will be added to the generated code to check for the specified condition(s).

C. Only one Condition/Action pair can be defined for a single transformation or for a job.

D. The available Condition/Action pairs for transformations and jobs will vary - that is, different Condition/Action pairs may exist for the SQL Join transformation versus the Table Loader transformation.

Correct Answer: C
