QUESTION 1

Identify the two delimiter areas available to be configured in the Sequential File format tab properties? (Choose two.)

- A. File delimiter
- B. Null delimiter
- C. Final delimiter
- D. Field delimiter
- E. End of group delimiter

Correct Answer: CD

QUESTION 2

When using Runtime Column Propagation, which two stages require a schema file? (Choose two.)

- A. Peek stage
- B. Pivot stage
- C. Column Import stage
- D. DB2 Connector stage
- E. Sequential File stage

Correct Answer: CE

QUESTION 3

Which two statements are true about stage variables in a Transformer Stage? (Choose two.)

- A. Stage variables can be set to NULL.
- B. Stage variables cannot be set to NULL.
- C. Varchar stage variables can be initialized with spaces.
- D. Stage variables are refreshed with default values before each new input row is processed.
- E. A stage variable in one Transformer can refer to a stage variable in another Transformer, as long as the second Transformer was processed earlier in the job flow.

Correct Answer: AC

QUESTION 4

Your job sequence must be restartable. It runs Job1, Job2, and Job3 serially. It has been compiled with "Add checkpoints so sequence is restartable". Job1 must execute every run even after a failure. Which two properties must be selected to ensure that Job1 is run each time, even after a failure? (Choose two.)

- A. Set the Job1 Activity stage to "Do not checkpoint run".
- B. Set trigger on the Job1 Activity stage to "Unconditional".
- C. In the Job1 Activity stage set the Execution action to "Run".
- D. In the Job1 Activity stage set the Execution action to "Reset if required, then run".
- E. Use the Nested Condition Activity with a trigger leading to Job1; set the trigger expression type to "Unconditional".

Correct Answer: AD

QUESTION 5

You are assigned to correct a job from another developer. The job contains 20 stages sourcing data from two Data Sets and many sequential files. The annotation in the job indicates who wrote the job and when, not the objective of the job. All link and stage names use the default names. One of the output columns has an incorrect value which should have been obtained using a lookup. What could the original developer have done to make this task easier for maintenance purposes?

- A. Name all stage and links the same.
- B. Name all stages and links based on what they do.
- C. Indicate all stage names within the job annotation.
- D. Name all stage and links with column names and ideas.

Correct Answer: B
